A

FIELD PROJECT REPORT (SEM II – RM03)

ON

"An Analytical Study (MYSQL, EXCEL) of Current Trends in Service Quality Offering to The Passenger at Walmikeshwar Travels".

SUBMITTED TO

SAVITRIBAI PHULE PUNE UNIVERSITY

IN PARTIAL FULFILLMENT OF 2 YEARS FULL TIME COURSE

MASTER OF BUSINESS

ADMINISTRATION (MBA)

SUBMITTED BY

Shelake Anand Santosh

UNDER THE GUIDENCE OF

Dr. Siddharth Karale

SINHGAD BUSINESS SCHOOL, PUNE – 411004

BATCH 2024-2026

Sinhgad Institutes

DECLARATION

I Shelake Anand Santosh here-by declare that the Field Project with **"An Analytical Study (MYSQL, EXCEL) of Current Trends in Service Quality Offering to The Passenger at Walmikeshwar Travels"** is my genuine work and has been completed by me in partial fulfilment of Semester II -MASTER OF BUSINESS ADMINISTRATION (2024-2026) degree examination as prescribed by SINHGAD BUSINESS SCHOOL, PUNE, affiliated to SAVITRIBAI PHULE PUNE UNIVERSITY, PUNE. This has not been submitted for any other examination and does not form the part of any other course under taken by me.

Date: **Student's sign**

Place: **Shelake Anand Santosh**

ACKNOWLEDGEMENT

With immense pride and sense of gratitude, I take this golden opportunity to express my sincere regards to Dr. Shriram Dawkhar, Director, Sinhgad Business School, Pune. I am extremely thankful to my Field Project Guide Dr. Siddharth Karale for his guidance throughout the project. I tender my sincere regards to the Company Guide Mr. Sachin Tipe for giving me guidance, suggestions and invaluable encouragement which helped me in the completion of the project. I will fail in my duty if I do not thank the non-Teaching staff of the institute for their Co-operation. I would like to thank all those who helped me in making this project complete and successful.

Date: **Student's sign**

Place: **Shelake Anand Santosh**

CHAPTER I
INTRODUCTION

1. Statement of the Problem.
2. Purpose / Objectives of the Project.
3. Theoretical Framework.
4. Significance of the Project.

1.1 STATEMENT OF THE PROBLEM

This project aims to explore and analyze the evolving passenger trends and assess the quality of services provided by Walmikeshwar Travels. In the rapidly changing transportation sector, understanding customer preferences, behavior, and satisfaction levels is crucial for maintaining competitiveness and ensuring sustainable business growth. This study intends to evaluate how passengers perceive the service quality of Walmikeshwar Travels and how these perceptions influence their travel decisions and loyalty.

The research will investigate various factors such as travel frequency, service expectations, booking preferences, pricing sensitivity, punctuality, cleanliness, comfort, staff behavior, and overall customer satisfaction. By analyzing passenger data and feedback, this study seeks to identify patterns and insights that can help the company enhance its service offerings and align better with customer needs.

The scope of the project includes primary data collection through surveys, along with secondary data analysis from existing reports and records. The study will focus on key routes and passenger segments served by Walmikeshwar Travel. This results to offering actionable recommendations to improve service standards, customer retention, and business performance.

In today's competitive travel and transportation industry, understanding passenger trends and ensuring high service quality are critical for customer satisfaction and business growth. Walmikeshwar Travels, like many regional travel operators, faces challenges in adapting to the evolving expectations of passengers, varying travel patterns, and growing competition from other transport providers and digital platforms.

There is a need to evaluate whether the current service quality standards align with the expectations of passengers. So, researcher entitled the topic as **"An Analytical Study (MYSQL, EXCEL) of Current Trends in Service Quality Offering to The Passenger at Walmikeshwar Travels".**

This study aims to analyze passenger trends and assess service quality to identify key areas of improvement, enhance customer satisfaction, and support strategic decision-

making for Walmikeshwar Travels.

1.2 PURPOSE / OBJECTIVES OF THE PROJECT

The primary purpose of this project is to conduct an in-depth analytical study to understand passenger trends and evaluate the service quality of Walmikeshwar Travels, Bhoom, Dharashiv. With growing competition and increasing customer expectations in the travel and transportation sector, it has become essential for service providers to constantly monitor customer behavior and satisfaction levels. This project aims to use data-driven approaches to gather, analyze, and interpret passenger feedback, travel patterns, and service-related parameters to derive actionable insights for business improvement.

As an MBA student with a specialization in Business Analytics, this project offers an excellent opportunity to apply analytical tools such as Excel, SQL to real-world data, thus enhancing decision-making capabilities and contributing to business transformation. The insights derived from this study will not only help in identifying current service gaps but also support Walmikeshwar Travels in designing effective strategies to meet passenger expectations and enhance service quality.

Objectives of the Project:

1. To study the travel behavior and usage patterns of passengers using Walmikeshwar Travels.

2. To assess the level of customer satisfaction based on various service quality dimensions such as punctuality, comfort, cleanliness, pricing, staff behavior, and safety.

3. To identify key current trends, such as frequency of travel, booking preferences, route popularity, and peak travel periods.

4. To analyze the relationship between service quality parameters and overall passenger satisfaction using analytical tools and techniques.

5. To evaluate the impact of customer satisfaction on passenger loyalty and repeat travel behavior.

Goals of the Project:

The key goal of this project is to generate meaningful insights through data analysis that can help Walmikeshwar Travels, Bhoom, Dharashiv, improve its overall service quality and passenger experience. By applying various business analytics tools and techniques, this project aims to bridge the gap between customer expectations and actual service delivery. One of the major goals is to equip the organization with a deeper understanding of passenger travel patterns, preferences, and satisfaction levels, so they can make more informed, customer-centric decisions.

Another important goal is to highlight the practical value of business analytics in real-world business environments, particularly in the transportation and travel sector. The project intends to demonstrate how data collected from passengers when analyzed systematically using tools like Excel and SQL can uncover trends, identify service strengths and weaknesses, and lead to more strategic planning. It also aims to provide a comprehensive analytical report that not only presents the findings but also includes actionable recommendations that Walmikeshwar Travels can implement to improve customer satisfaction, boost customer loyalty, and optimize their operations.

Additionally, the project strives to contribute to the development of data-driven decision-making in regional and local transport services, helping small and medium-sized travel businesses like Walmikeshwar Travels remain competitive in a customer-driven market. From an academic perspective, the project also serves the goal of enhancing the researcher's own understanding and practical experience in applying business analytics principles, turning theoretical knowledge into hands-on, actionable business intelligence.

1.3 THEORETICAL FRAMEWORK

The theoretical framework of a project provides a foundation for understanding the key concepts, theories, and models that guide the research. In this project, the two major areas of focus are passenger trends and service quality, which are important aspects of the travel and transportation industry. This section explains the theories and models that support the study and help in analysing the data effectively.

1. Understanding Passenger Trends

Passenger trends refer to the behaviour, preferences, and travel patterns of customers who use transportation services. These trends help in understanding how, when, and why passengers travel, what services they prefer, and how their behaviour changes over time. In today's competitive environment, analysing passenger trends helps businesses like Walmikeshwar Travels make better decisions about routes, timings, pricing, and customer service.

This study uses concepts from consumer behaviour theory, which explains how customers make decisions based on their needs, preferences, experiences, and expectations. Factors such as frequency of travel, route preference, time of travel, reasons for travel (personal, business, tourism), and booking channels (online/offline) are part of this analysis. These behavioural patterns are important in identifying how passengers interact with the travel service and what improvements they expect.

2. Service Quality Concept

Service quality is another major area in this project. It refers to how well a service meets customer expectations. In the transportation sector, service quality includes factors like punctuality, cleanliness, comfort, staff behaviour, safety, ticket pricing, and ease of booking. Measuring service quality helps the organization understand customer satisfaction levels and identify areas where improvement is needed.

Service Quality Concept has five dimensions:

Tangibility – Physical aspects such as buses, seats, cleanliness, and infrastructure.

Reliability – Ability to provide promised service dependably and accurately (e.g., on-time arrivals, consistent service).

Responsiveness – Willingness to help customers and provide prompt service.

Assurance – Knowledge and courtesy of staff, and their ability to create trust and confidence.

Empathy – Providing personalized attention and care to passengers.

These five dimensions form the basis of the survey questions and data analysis in this project. They help in measuring how passengers perceive the service quality of Walmikeshwar Travels.

3. Customer Satisfaction and Loyalty

Customer satisfaction is the result of comparing customer expectations with their actual experience. If the service meets or exceeds expectations, the customer is satisfied. Satisfied passengers are more likely to become repeat customers and promote the service through word of mouth. This project also looks at how service quality affects customer loyalty, which is important for the long-term success of Walmikeshwar Travels.

The Expectation-Confirmation Theory (ECT) is also relevant here. This theory states that customer satisfaction depends on how well their expectations are confirmed after using a service. If their expectations are met or exceeded, they are satisfied. If not, they are dissatisfied. This theory helps in linking service quality with customer satisfaction and future behaviour.

4. Role of Business Analytics

As an MBA student specializing in Business Analytics, the theoretical framework also includes the analytical approach used in the project. The project uses tools such as Excel and SQL to organize, analyse, and interpret passenger data. Through descriptive statistics, data segmentation, filtering, and visualizations, the project brings out meaningful insights that help the business make better decisions. Business analytics adds value by converting raw data into actionable information.

By combining customer behaviour theory, service quality models like SERVQUAL, and business analytics tools, this theoretical framework supports the entire research process. It helps in analysing real-world data in a structured way and ensures that the project findings are reliable, practical, and useful for Walmikeshwar Travels to enhance its services and customer satisfaction.

1.4 SIGNIFICANCE OF THE PROJECT

The significance of this project lies in its ability to create real value for both the organization and its customers by using data-driven insights. In today's fast-changing and highly competitive business environment, understanding customer needs and expectations has become more important than ever before. This project focuses on studying passenger trends and evaluating service quality for Walmikeshwar Travels, which is an essential service provider in the Bhoom and Dharashiv region. As an MBA student specializing in Business Analytics, this project gives a unique opportunity to

apply analytical tools and techniques to a real-world business problem and contribute meaningfully to business growth and customer satisfaction.

1. Improving Service Quality

One of the most important contributions of this project is to help Walmikeshwar Travels improve its service quality. By collecting data directly from passengers through surveys and analysing their feedback, the company can identify its strengths and weaknesses. Passengers often have valuable opinions about things like punctuality, cleanliness, comfort, staff behavior, safety, pricing, and overall experience. If these opinions are studied carefully, they can help the company improve its services in a way that better meets customer expectations. In a service-based industry, better service quality leads to better customer satisfaction and loyalty, which is essential for long-term success.

2. Understanding Passenger Trends

Another significant aspect of this project is the understanding of passenger trends and travel behaviour. It is important for any travel company to know who their passengers are, how frequently they travel, what routes are most popular, what time slots are most preferred, and what factors influence their travel decisions. This kind of analysis helps the company in route planning, schedule optimization, and targeted marketing. If Walmikeshwar Travels knows which routes are in high demand or which time slots are underutilized, they can make better decisions to maximize revenue and improve customer convenience.

3. Data-Driven Decision Making

This project also promotes a culture of data-driven decision-making. In many small or regional businesses, decisions are often made based on assumptions or experience. However, with the help of Business Analytics tools like Excel and SQL, decisions can be based on real data and factual insights. This shift towards data-based decision-making helps in reducing errors, increasing efficiency, and achieving better results. For Walmikeshwar Travels, this can be a stepping stone toward modernizing their operations and staying competitive in the market.

4. Enhancing Customer Satisfaction and Loyalty

One of the long-term impacts of this project is the potential to increase customer satisfaction and loyalty. Satisfied customers are more likely to use the service again and

recommend it to others. If the company is able to identify and address the pain points in the customer journey, it can build a loyal customer base. A loyal customer base is not only profitable but also acts as a strong support for business growth through word-of-mouth promotion and repeat travel bookings.

5. Practical Application of Business Analytics

From an academic and professional perspective, this project is highly valuable for applying theoretical knowledge in a practical business scenario. As an MBA student with a Business Analytics specialization, this project allows the use of analytical tools like Excel for data summarization, charts, and visual representation, and SQL for data filtering, grouping, and deeper analysis. This hands-on application strengthens analytical skills, decision-making ability, and business problem-solving capability skills that are highly valued in the industry.

6. Contribution to Regional Business Development

Walmikeshwar Travels is a key transportation service provider in Bhoom and Dharashiv, and helping such a local business improve through analytics contributes to regional business development. Unlike large corporations, regional businesses often do not have access to high-end data analytics solutions. This project demonstrates how even small or medium-scale businesses can benefit from basic analytics techniques to grow and improve.

CHAPTER II
REVIEW OF LITERATURE

2.1 INTRODUCTION

The literature review contains the review of literature of various articles from national and international journals, books, PhD thesis on different perceptions. Reviewing different literatures helped the researcher to focus on different research Methodologies and various tools highlighted by different authors in their work.

2.2 LITERATURE REVIEW

Investigating the factors determining service quality in Bhopal's multimodal public transport system: A factor analysis

Rahul Tanwar, Pradeep Kumar Agarwal

Case Studies on Transport Policy 19, 101317, 2025

Multimodal public transport systems are crucial for sustainable urban mobility in growing cities like India. This study investigates the factors determining service quality in Bhopal's multimodal public transport system using factor analysis. A survey of 650 regular users was conducted to assess service quality perceptions. Exploratory factor analysis revealed six significant factors: integration (22.12 % of variance explained), reliability (14.30 %), comfort (9.38 %), safety (8.07 %), accessibility (6.85 %), and customer service (5.74 %). The factors demonstrated high internal consistency reliability (Cronbach's alpha > 0.8). Satisfaction levels varied across factors, with accessibility and comfort receiving higher ratings than reliability. Demographic comparisons revealed significant differences based on gender and age. The findings provide insights into the critical factors shaping service quality perceptions and offer a framework for assessment. The results highlight the need for targeted interventions, particularly in areas with lower satisfaction levels. This research contributes to the literature on public transport service quality in developing cities and underscores the importance of considering passenger perspectives in multimodal transport planning and management. This research contributes to the growing body of literature on public transport service quality in developing cities and underscores the importance of considering passenger perspectives in the planning and management of multimodal transport systems.

Standardization of Commuter Perception Survey to Measure Transit Service Quality–An Indian Study

Vishwajeet Kishore Verma

Transportation Research Procedia 82, 791-821, 2025

Survey design and data collection methodology has profound impact on a response-based study especially if transit commuter's satisfaction and importance ratings are to be collected. This paper discusses survey methodology design, and the outcomes of data collection effort related to the floating of three formats of a questionnaire through two modes of survey, namely conventional and online. This standardizes Commuters' Satisfaction and Importance Survey (CSIS) methodology. Effectiveness is examined in terms of response rate, completion rate, cost of survey, target population representatives, and influence of scale's description and presentation. The experiences gained are shared in the form of challenges, observations, and improvement measures. The survey at the pre-test level is conducted on bus and metro routes in two different Indian cities. Eventually, the standardized survey instrument is used to conduct CSIS at varying transit systems i.e., Commuter Rail, MRT, BRT, and CBT in New Delhi, Mumbai, and Ahmedabad.

Evaluation of Service Quality in Passenger Transport with a Focus on Liner Maritime Passenger Transport a Systematic Review

Jelena, Ines Kolanovic, Alen Jugovic, Dalibor Brnos

Sustainability 16 (3), 1125, 2024

Every mode of passenger transport plays an important, strategic role in the lives of a country's people, its economy, its global business, and its tourism. In today's competitive world, passenger transport relies heavily on its performance, which in turn is determined by service quality provided to customers. The evaluation of service quality in passenger transport is crucial to ensure acceptable quality standards for users and to improve the services offered to passengers and travelers. The aim of this paper is to provide an overview of the methods used to evaluate service quality in passenger transport in the Web of Science (WoS) Core Collection, with a particular focus on liner maritime passenger transport. The results show that a combination of qualitative and quantitative methods is most frequently used in the selected articles. However, the number of scientific articles dealing with this topic has increased in recent years. This shows the growing interest in analysing service quality for a particular mode of transport. The majority of articles are assigned to the areas of Transportation, Business and Economics, Science and Technology, Environmental Sciences, etc. Future research should focus on evaluating service quality through the impact of new technologies such as artificial intelligence, including relevant factors, on service quality in passenger transport.

Impact analysis of actual traveling performance on bus passenger's perception and satisfaction

Rui Rong, Lishan Liu, Ning Jia, Shoufeng Ma

Transportation Research Part A: Policy and Practice 160, 80-100, 2022

Customer satisfaction has always been a pivotal indicator of public transport service quality. However, most existing studies on public transport satisfaction focused on passenger perception without considering the actual traveling performance. Thus, whether passenger perception veritably reflects the actual performance remains to be investigated. This paper adopts the gradient boosting decision trees approach to reveal the relationship between actual on-board performance and passenger satisfaction driven by individual perception. The work utilizes a mixed dataset combining customer satisfaction survey (CSS) with actual traveling data collected in Shijiazhuang, China. Instead of a direct equivalence, the results indicate the complex non-linear relationship between passenger perception and actual on-board performance. These findings enable deriving strategies for administrators and operators to improve the public transport service quality and customer satisfaction in a more effective and targeted way.

CHAPTER III
METHOD

(Describe how the study was conducted, including a specific description of subject, procedures, equipment, materials and other information pertinent to the study)

1. Introduction
2. Research Design
3. Data collection Method
4. Sampling Method and Sample Size
5. Research Subject
6. Tools and equipment used
7. Data Analysis Procedure
8. Summary

3.1 INTRODUCTION

This chapter explains the process and methods used to conduct the research project titled "An Analytical Study of Current Trends and Service Quality Offering to The Passenger with Reference to The Walmikeshwar Travel". It covers how the study was conducted, what tools and techniques were used, how data was collected and analysed, and what materials and resources were required to complete the project successfully. The purpose of this chapter is to provide a clear understanding of the research process followed in this study.

3.2 RESEARCH DESIGN

The research design refers to the overall structure and strategy used to carry out the study. In this project, a descriptive and analytical research design has been used. Descriptive research is used to gather information about passenger preferences, travel behaviour, and service quality perceptions. Analytical research is used to examine the collected data and draw meaningful insights from it using business analytics tools.

3.3 DATA COLLECTION METHOD

For this project, primary data collection was used. Primary data is the information collected directly from the respondents for the purpose of this research. The main tool used for data collection was a structured questionnaire, created using Google Forms.

The questionnaire included various types of questions such as:

- Multiple-choice questions
- Demographic questions (age, gender, occupation)

The questionnaire was shared online. Online sharing was done through WhatsApp and social media platforms.

3.4 SAMPLING METHOD AND SAMPLE SIZE

In this study, a convenience sampling method was used. This means that data was collected from passengers who were easily available and willing to respond. The respondents included a

mix of regular travellers, occasional passengers, students, working professionals, and senior citizens. The sample size selected for this study was 104 respondents, which provided enough data to analyse trends and service satisfaction levels effectively.

3.5 RESEARCH SUBJECT

The research subjects in this study were passengers who travel with Walmikeshwar Travels in the Bhoom and Dharashiv region. These respondents represented a diverse group in terms of age, occupation, travel purpose (personal, work, tourism), and frequency of travel. This diversity helped in getting a comprehensive understanding of passenger expectations and satisfaction levels.

3.6 TOOLS AND EQUIPMENT USED

To conduct this research and analyse the data, the following tools and equipment were used:

Google Forms: To design and distribute the survey questionnaire and collect responses.

SQL: Used to analysis data by applying queries such as filtering, grouping and summarising. SQL helped in generating deeper insights from the data

Microsoft Excel: To clean, sort, and organize the collected data. Excel was also used to calculate percentages, averages, and create charts and graphs for visual representation.

Laptop: To run the software tools and prepare the final report.

Internet Access: For sharing the questionnaire and gathering responses online.

3.7 DATA ANLYSIS PROCEDURE

After collecting the responses, the data was exported into Excel for analysis. The data was first cleaned by removing duplicate or incomplete entries. Then the following steps were taken:

Descriptive analysis: Calculating frequencies, averages, and percentages.

Trend analysis: Identifying common travel patterns, peak hours, route preferences, etc.

Service quality analysis: Evaluating passenger satisfaction.

SQL queries: Used for detailed filtering and comparison across different passenger segments (e.g., age group, travel frequency).

Charts such as bar graphs, pie charts, line charts, and tables were created to represent the findings in a simple and visual manner.

3.8 SUMMARY

To summarize, this chapter detailed the methodology followed for conducting the research. A structured questionnaire was used to collect primary data from passengers,

and tools like Excel and SQL were used for analysis. The sample was selected based on convenience, and the findings were derived using both descriptive and analytical methods. This methodology ensured that the study was conducted in a systematic, ethical, and meaningful manner to achieve the goals of the research.

CHAPTER IV
DATA COLLECTION AND ANALYSIS

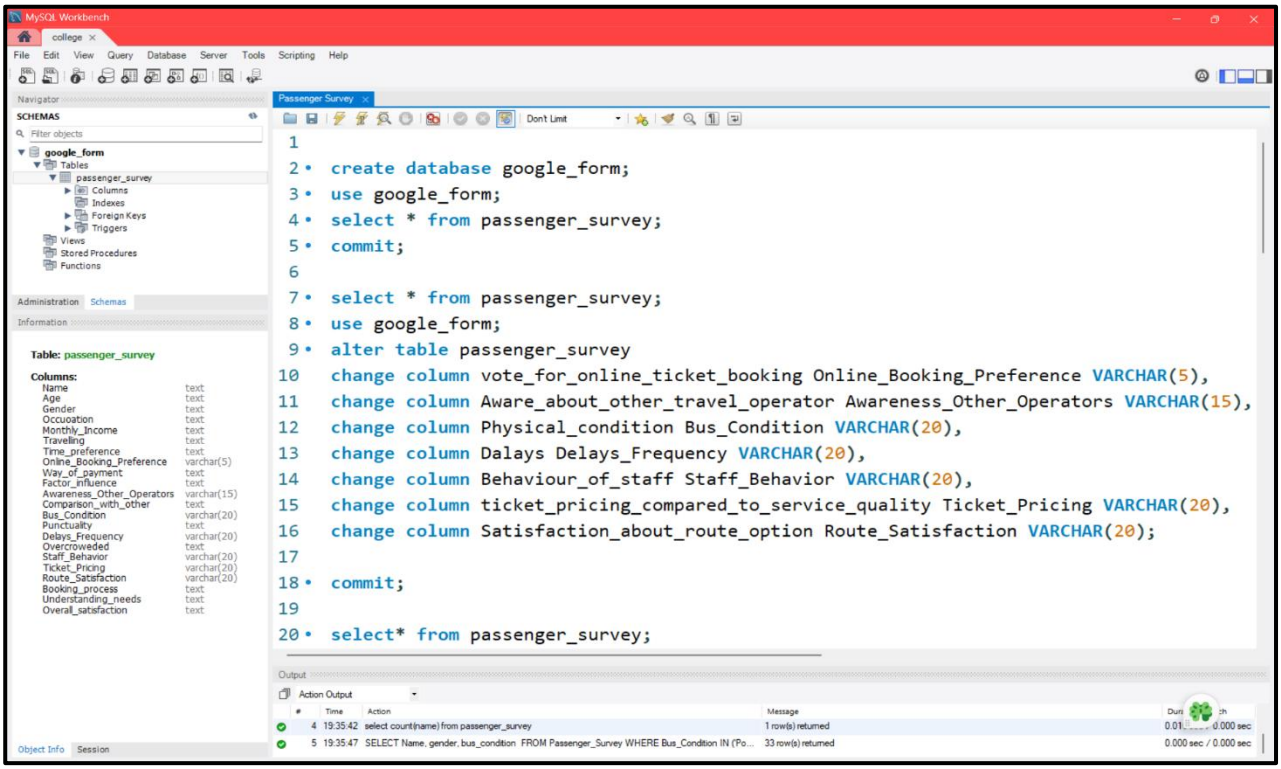

1. Collecting relevant data from sources
2. Data Analysis Through MySQL
3. Data Analysis Through Excel

4.1 COLLECTING RELEVANT DATA FROM SOURCES

For this research, primary data was collected directly from passengers of Walmikeshwar Travels using a structured questionnaire. The questionnaire was designed to gather information on passenger demographics, travel behaviour, service quality perceptions, and overall satisfaction levels.

4.2 DATA ANALYSIS THROUGH MYSQL

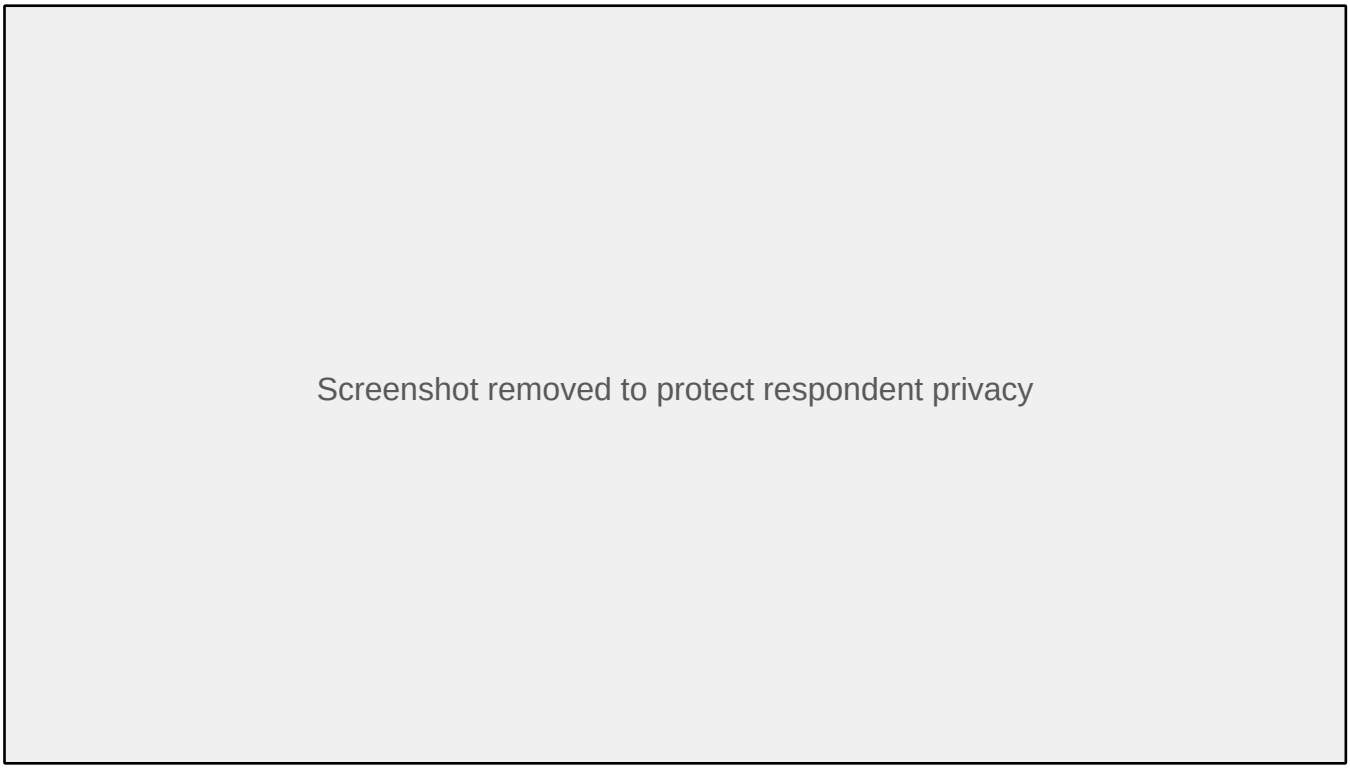

IMAGE NO. 1 Inserting passenger_Survey data in MySQL

INTERPRETATION:

In this screenshot of MySQL code, first of all we create database named as ‘google_form’. Then import a data from excel sheet named as ‘passenger_survey’. After this table is created named as ‘passenger_survey’. Then we made changes in table such as column name, data type as per requirement.

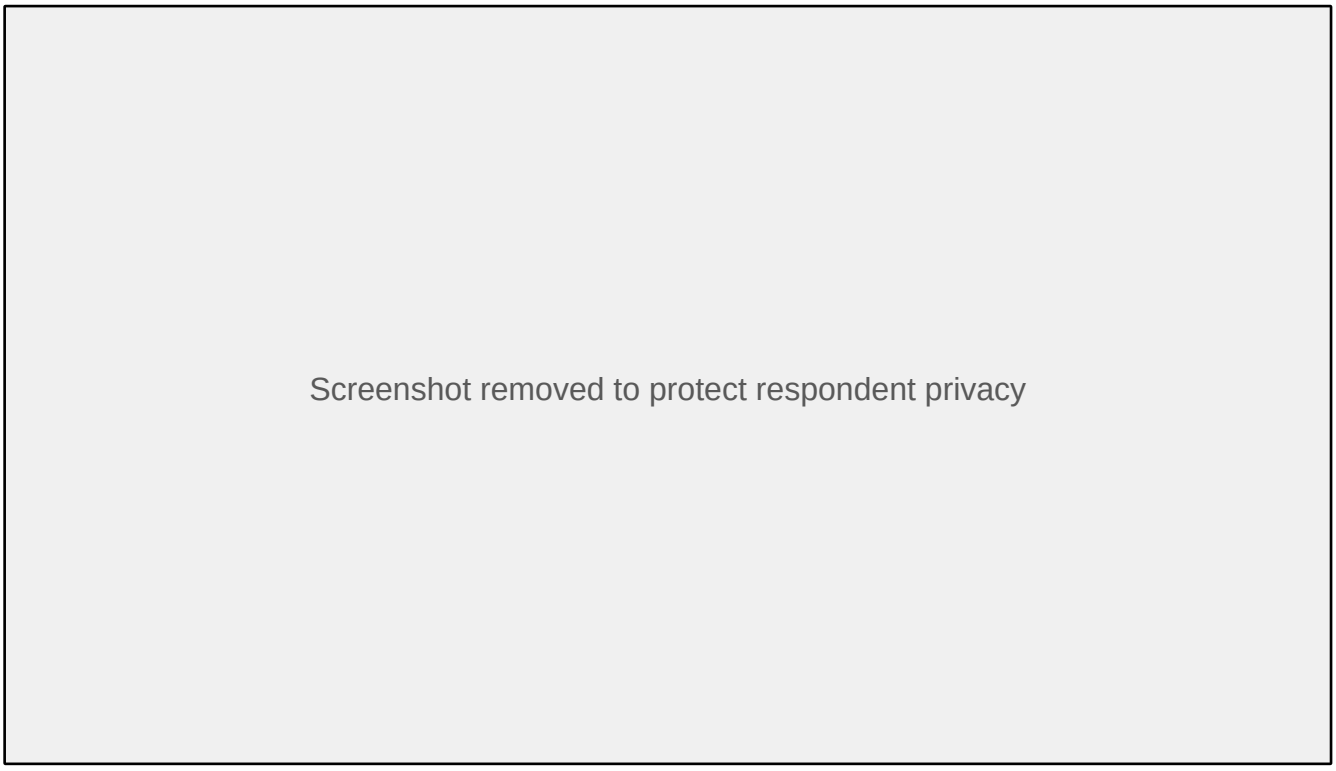

IMAGE NO. 2 Select all data from “Passenger_survey”

INTERPRETATION:

In this screenshot of MySQL code, after importing the excel sheet named as ‘passenger_survey’ in MySQL, the SQL query results that it displays all data from a “passenger_survey” table, from “google_form” database.

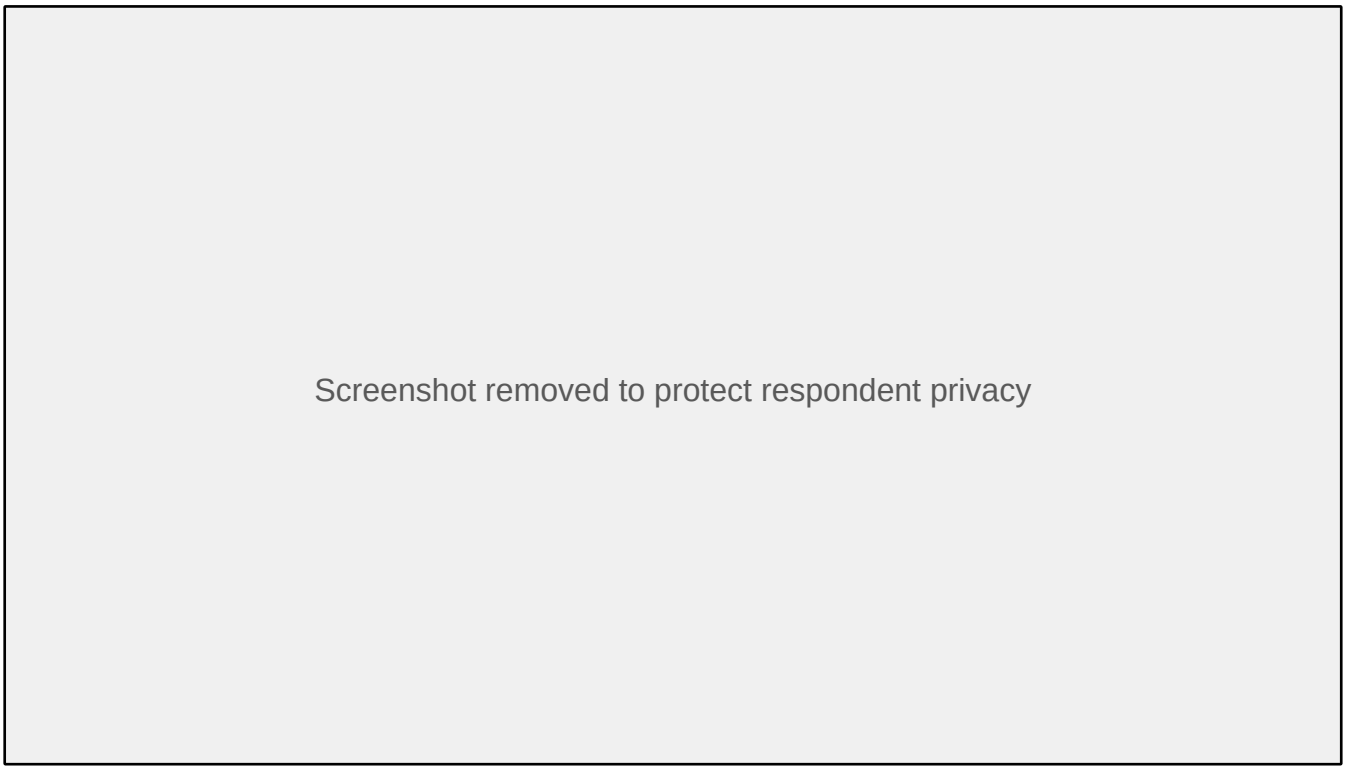

IMAGE NO. 3 Opinion on Bus Condition

INTERPRETATION:

In this screenshot of MySQL code, this image shows a SQL query result filtering passenger survey data for those who rated bus conditions as "Poor" or "Very Poor". It's used to identify areas for improvement in bus services. This query aims to isolate and identify passengers who expressed dissatisfaction with the bus conditions. This information can be used to highlight areas for improvement in the bus service.

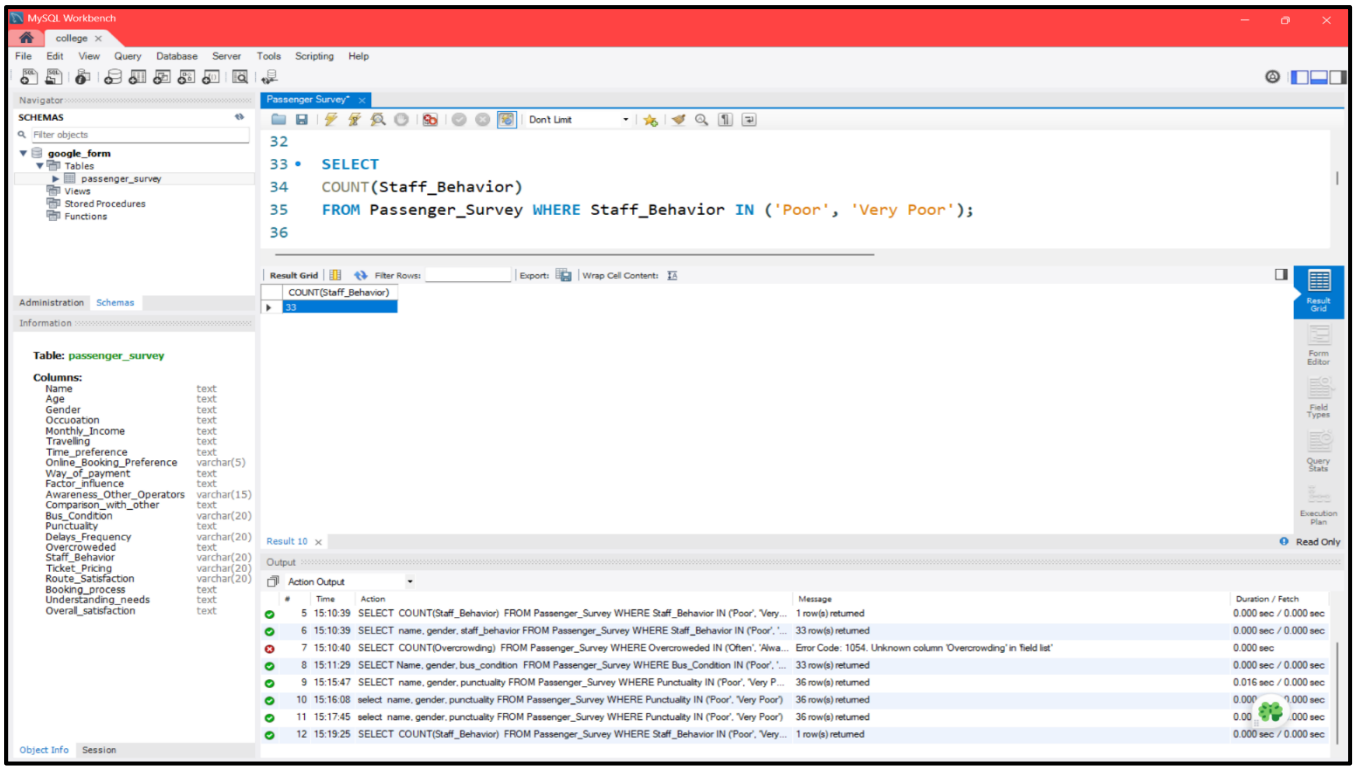

IMAGE NO. 4 Opinion on Pnctuality

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result. The result table shows the names and genders of passengers who rated the punctuality as either "Poor" or "Very Poor". This indicates that the query successfully identified passengers who expressed dissatisfaction with the punctuality of the service. This information can be used to improve service punctuality and address customer concerns.

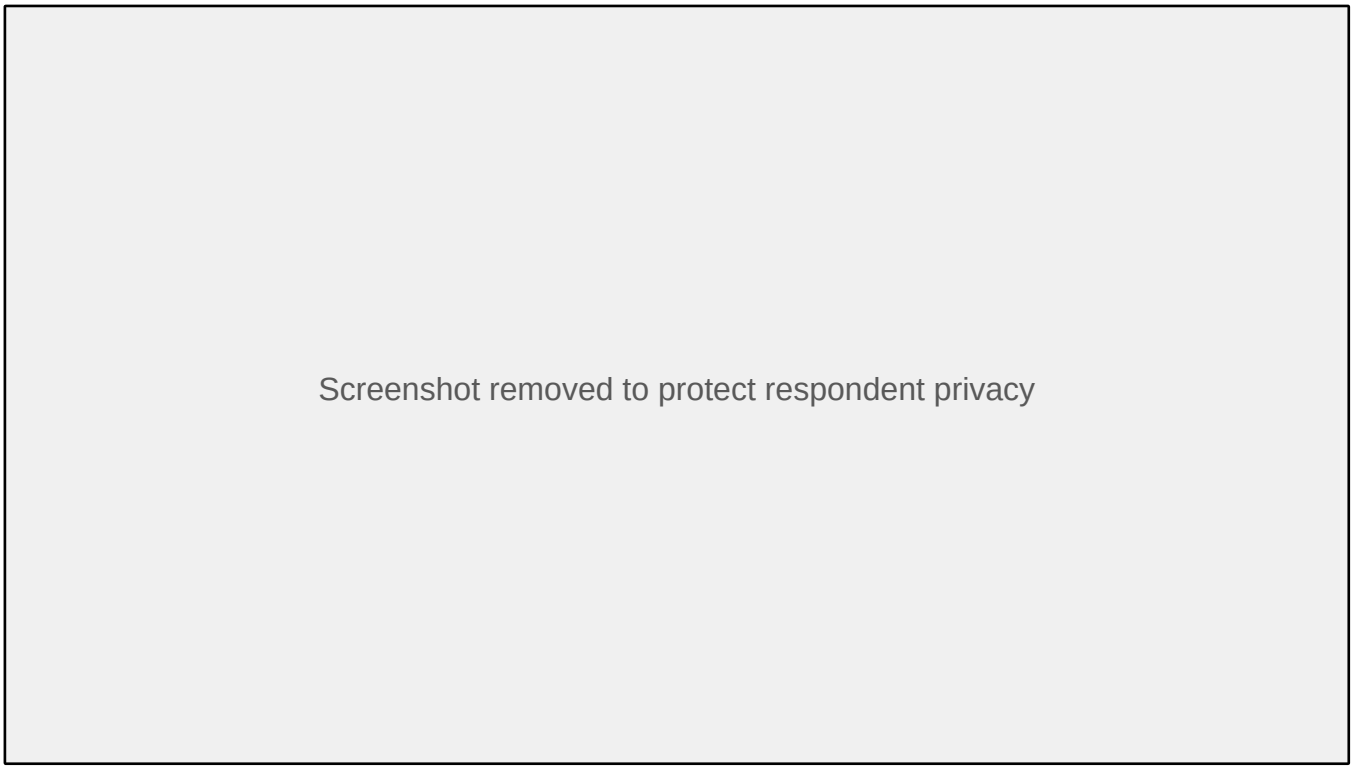

IMAGE NO. 5 Count of respondents with Staff behaviour

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result. The result table shows a single value in the "COUNT(Staff_Behavior)" column. This value represents the number of passengers who rated the staff's behavior as either "Poor" or "Very Poor". This provides a quantitative measure of customer dissatisfaction related to staff behavior, which can be used to improve service quality.

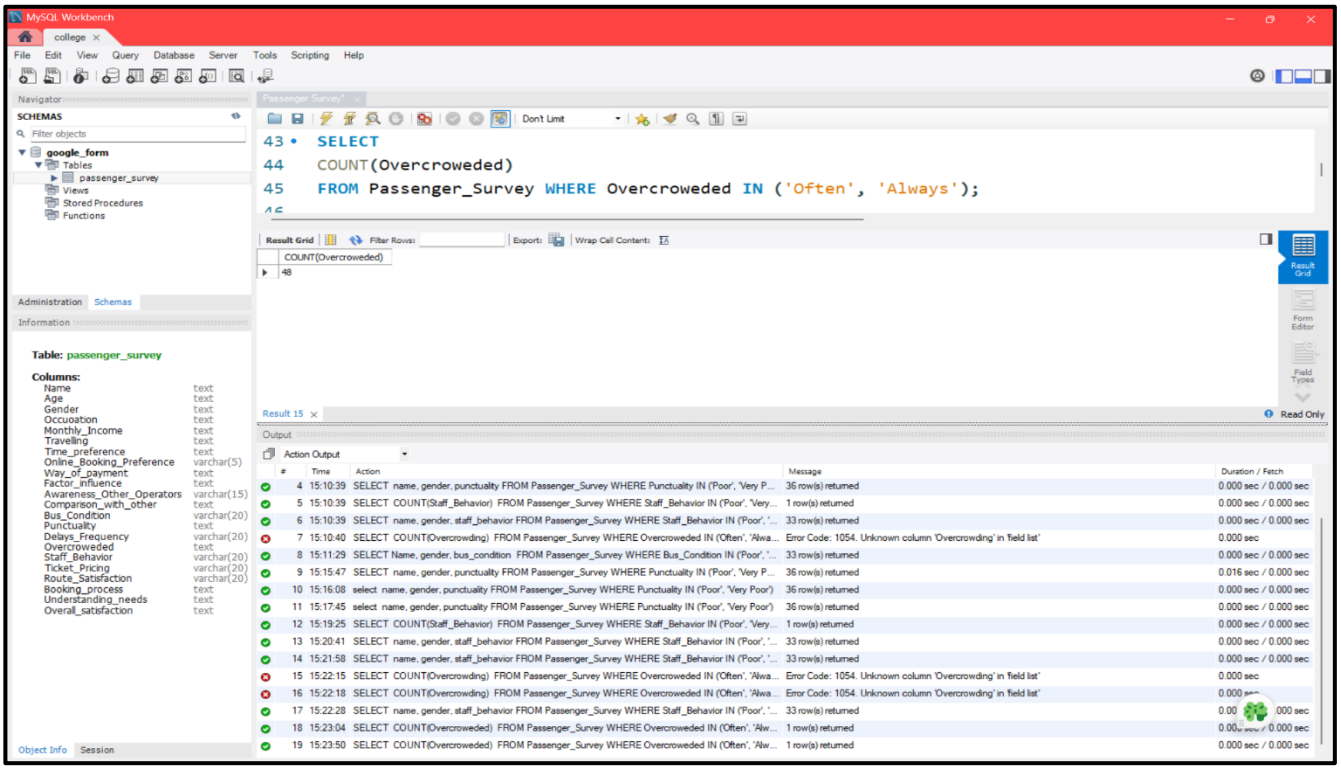

IMAGE NO. 6 Opinon On Staff behaviour

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result. The result table displays the names, genders, and staff behavior ratings of passengers who rated the staff behavior as either "Poor" or "Very Poor". This data can be used to understand and improve staff interactions with passengers.

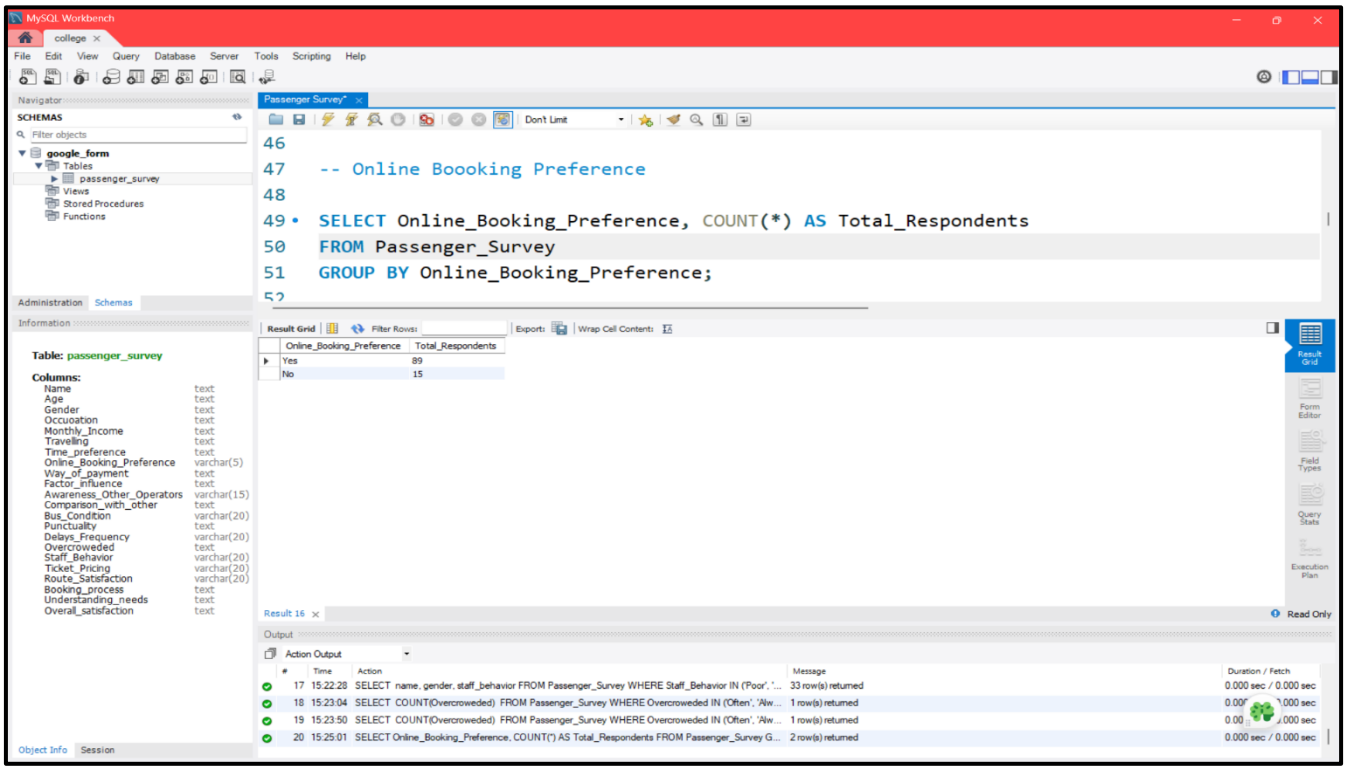

IMAGE NO. 7 Opinion on Overcrowded

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result**.** The result table shows a single value in the "COUNT(overcrowded)" column. This value represents the number of passengers who reported the service as being "Often" or "Always" overcrowded. This provides a quantitative measure of the overcrowding issue, which can be used to improve service quality and address customer concerns.

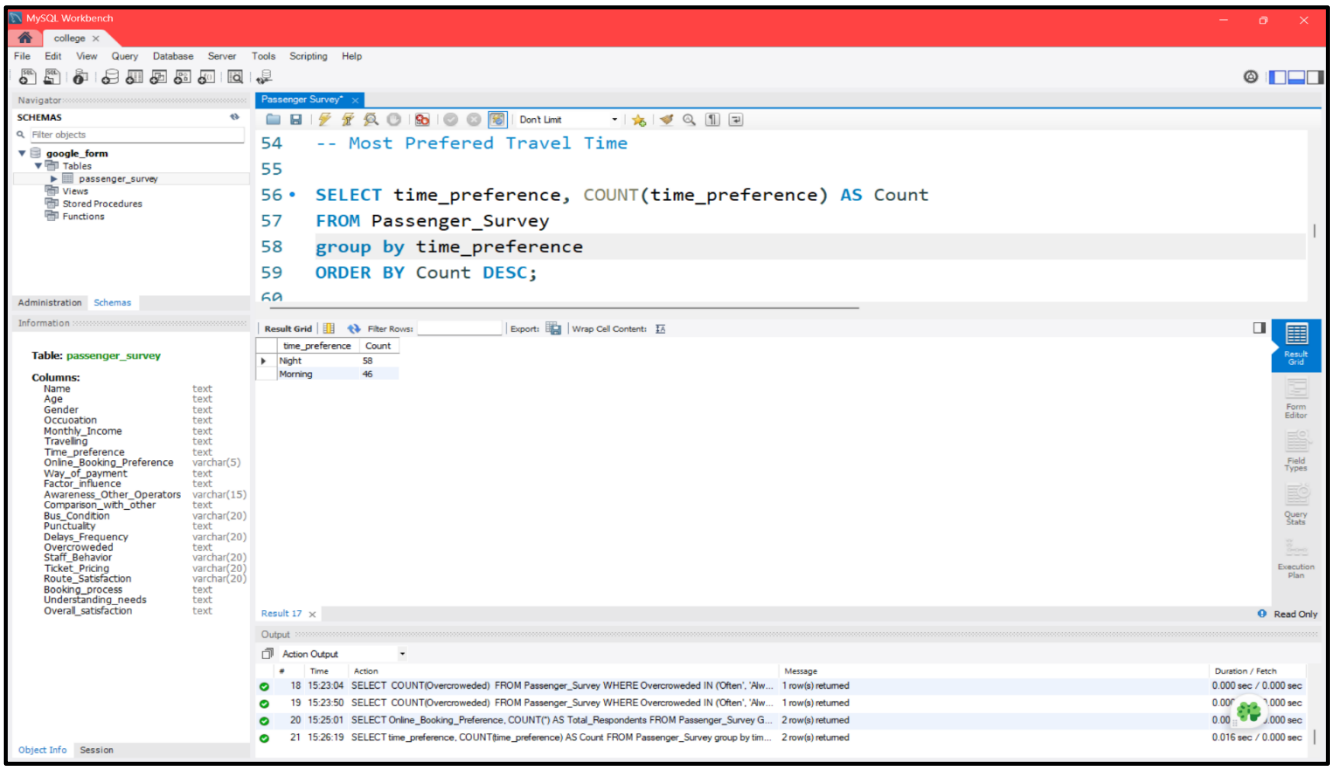

IMAGE NO.8 Online booking preference

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result**.** The result table shows two columns i.e. ‘Online_booking_preference’ and ‘Total_respondence’. ‘Online_Booking_Preference’ column contains the unique values found in it (i.e. "Yes" or "No"). ‘Total_Respondents’ column shows the count of passengers who selected each corresponding "Online_Booking_Preference" value. That is 89 respondents select “Yes” and remaining 15 respondents select “No” option. A significant portion prefers online booking, the service provider might invest in improving their online booking platform.

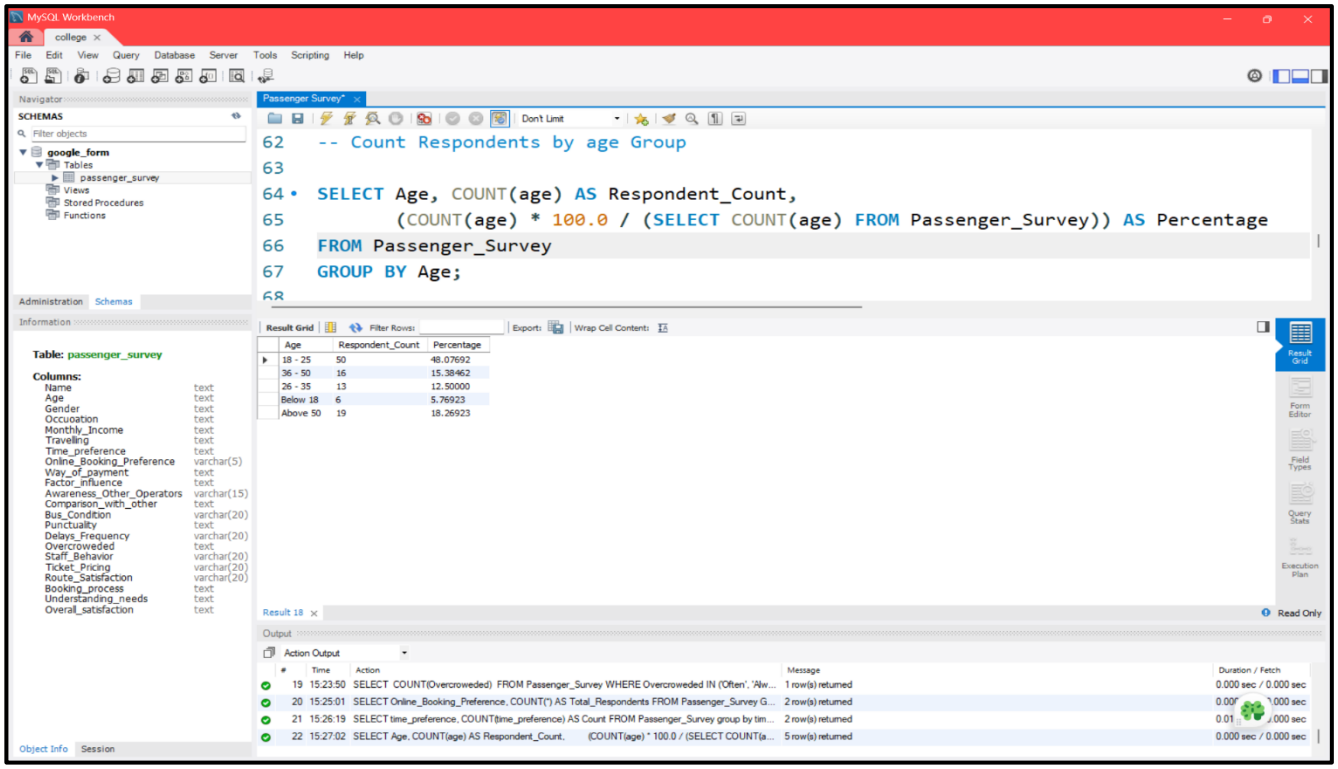

IMAGE NO. 9 Most Preferred Travel Time

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result**.** The result table shows two columns i.e. ‘time_preference’ and ‘Count’. ‘time_preference’ column contains the unique values (such as representing different times of day like "Night" or "Morning"). 58 respondents select ‘Night’ option and 46 respondents select ‘Morning’. The results show which times of day are most in demand. This information can be used to allocate resources effectively, such as scheduling more buses or drivers during peak hours.

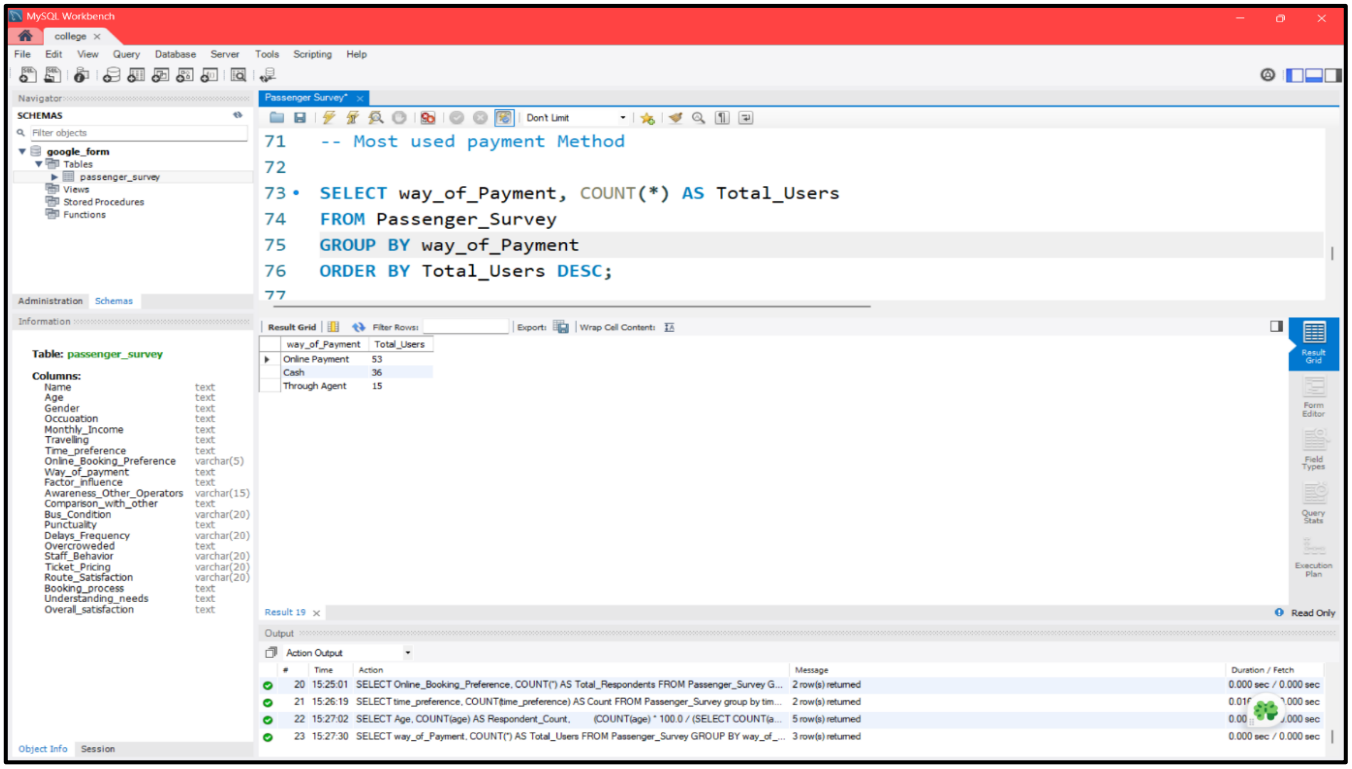

IMAGE NO. 10 Count respondents by age group

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result. The result table shows three columns. 1)Age: This column contains the unique age groups from the "Age" column (e.g., 18-30, 31-40, Above 50). 2)Respondent_Count: This column shows the number of respondents in each age group. 3)Percentage: This column shows the percentage of respondents in each age group relative to the total number of respondents. So, out of available respondents 6 respondents belong to below 18 age category, 50 respondents belong to 18 – 25 age category, 13 respondents belong to 26 – 35 age category, 16 respondents belong to 36 – 50 age category and 19 respondents having age above 50 years. This information can be used to identify the most represented age groups and understand the demographics of the user base.

IMAGE NO. 11 Most used payment method.

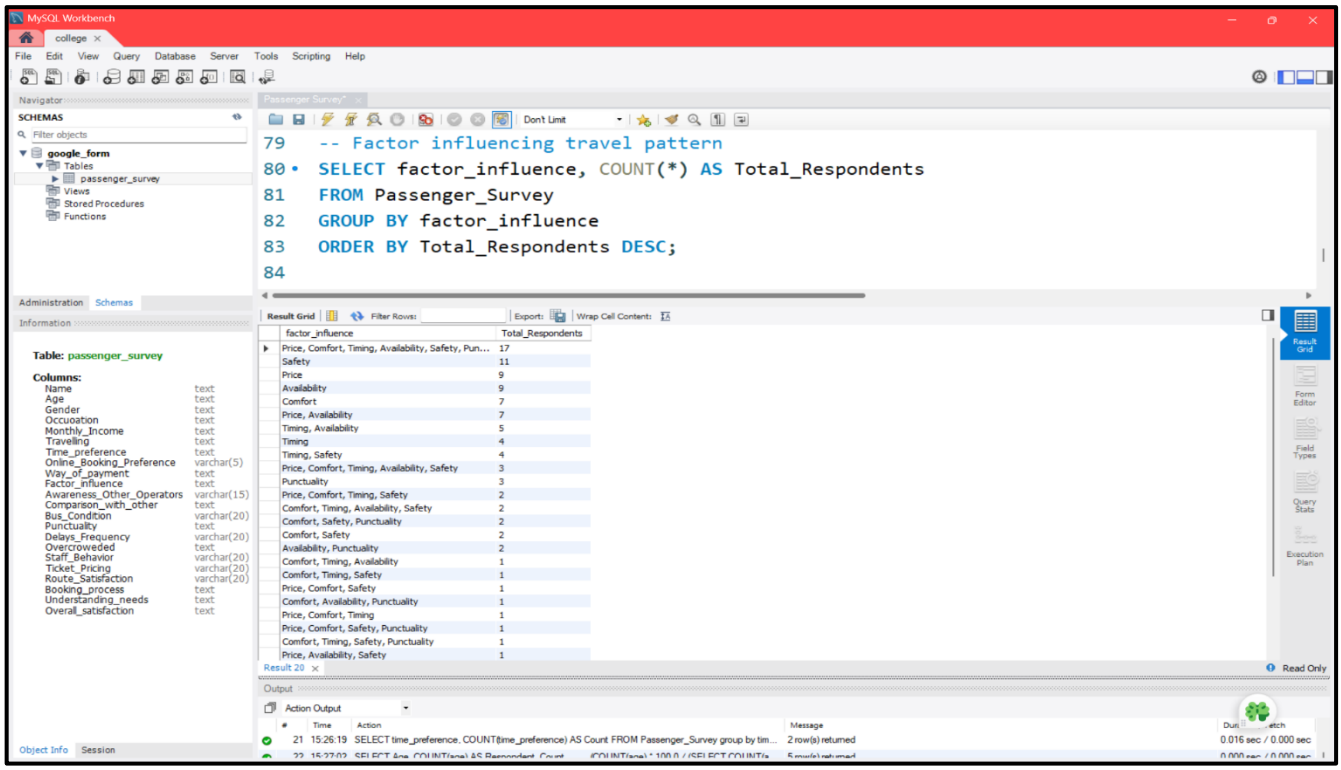

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result. The result table shows two columns. 1) way_of_Payment: This column contains the unique payment methods from the "way_of_Payment" column (e.g., Online Payment, Cash, Through Agent). 2)Total_Users: This column shows the number of passengers who used each corresponding payment method.

So, out of available respondents (passengers) 36 respondents pay for their ticket through cash, 53 respondents pay for their ticket through online payment, 15 respondents pay for their ticket through agent. This information can be used to prioritize and optimize payment options, ensuring the most popular methods are readily available.

IMAGE NO. 12 Factors influencing travel pattern

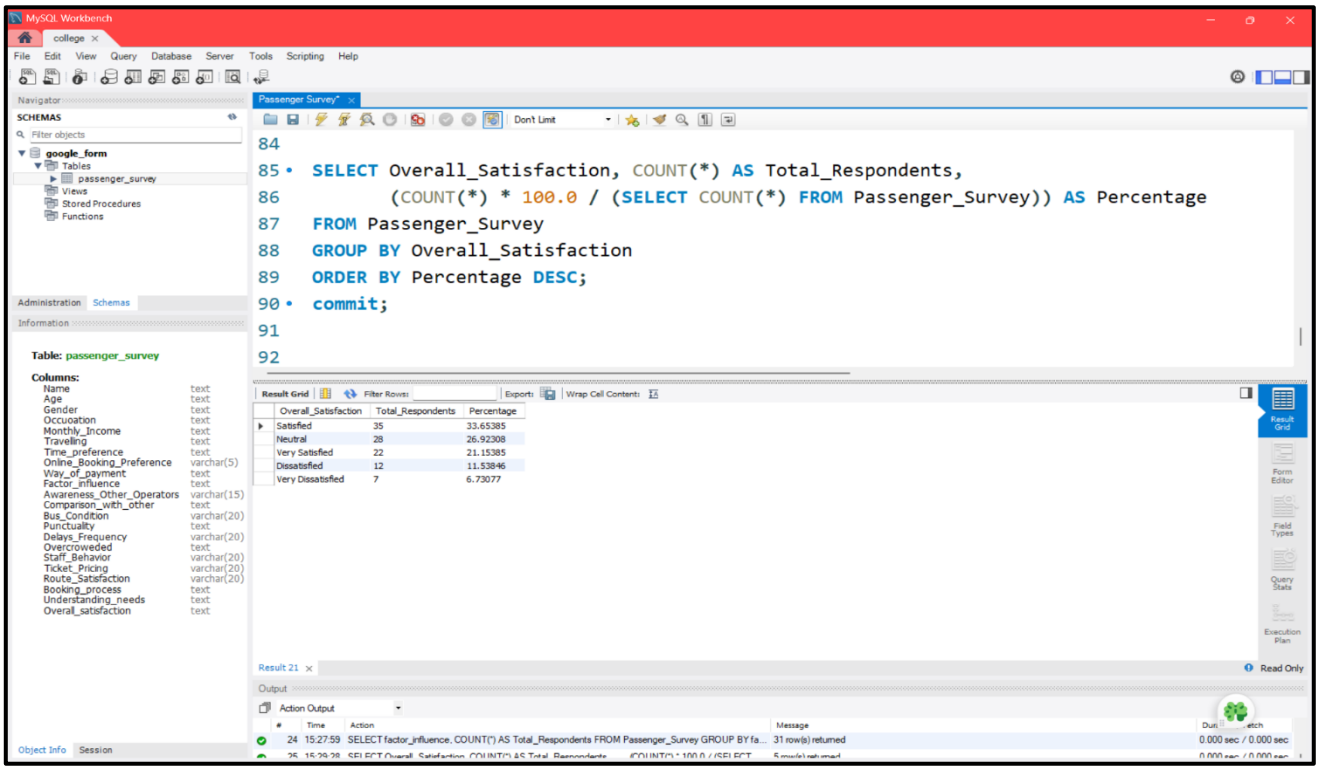

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result. The result table shows two columns. 1)factor_influence: This column contains the unique factors that influence passenger travel patterns (e.g. Price, Comfort, Timing, Availability, Safety). 2)Total_Respondents: This column shows the number of passengers who cited each corresponding factor**.**

The query identifies the most important factors that influence passenger choices related to travel. The results show which factors are most frequently mentioned, allowing the service provider to prioritize improvements in those areas.

IMAGE NO. 13 Count by Overall Satisfation

INTERPRETATION:

In this screenshot of MySQL code, the image shows a SQL query and its result. The result table shows three columns. 1)Overall_Satisfaction: This column contains the unique satisfaction levels from. The "Overall_Satisfaction" column (e.g., Satisfied, Neutral, Very Satisfied, Dissatisfied). 2)Total_Respondents: This column shows the number of respondents for each satisfaction level. 3)Percentage: This column shows the percentage of respondents for each satisfaction level relative to the total number of respondents.

So, out of available respondents (passengers) 22 respondents are very satisfied with Walmikeshwar Travels, 35 respondents are satisfied with Walmikeshwar Travels, 28 respondents are neutrally satisfied with Walmikeshwar Travels, 12 respondents are dissatisfied with Walmikeshwar Travels, 7 respondents are very dissatisfied with Walmikeshwar Travels.

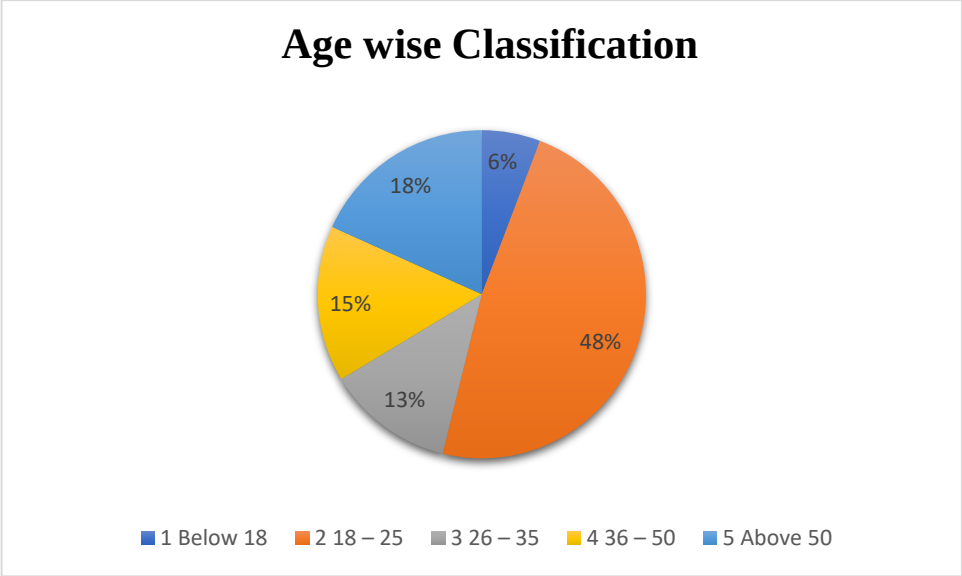

4.3 DATA ANALYSIS THROUGH EXCEL

The collated data has been processed and analysed to fulfil the Objectives lay down for the purpose of study. This analysis is essential for a systematic study with contemplated comparisons and processing. Interpretation is the result of analysis, which enables conversion of data into statement and conclusion, which ultimately complete the research objectives. Data analysis deals with analysis of whole data collected by researcher. Researcher analysed data with the help of statistical tool. The data has been analysed with the help of table, bar chart and Pie Diagram.

TABLE NO. 4.1 Age wise classification

Sr. No.	Age wise classification	No. of Respondents	Percentage
1	Below 18	6	5.8%
2	18 – 25	50	48.1%
3	26 – 35	13	12.5%
4	36 – 50	16	15.4%
5	Above 50	19	18.3%
	Total	**104**	**100%**

CHART NO. 4.1 Age wise classification

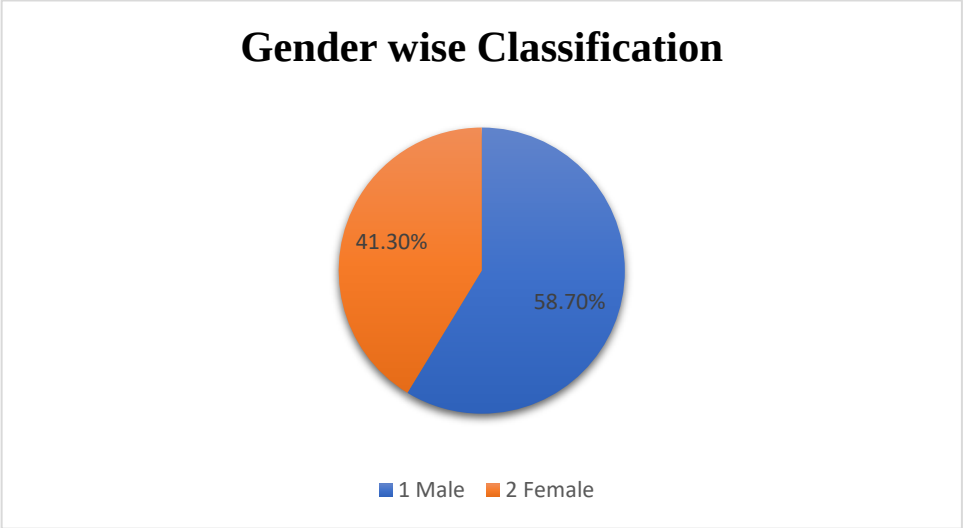

INTERPRETATION:

Above table shows that out of available respondents 6% respondents belong to below 18 age category, 48% respondents belong to 18 – 25 age category, 13% respondents belong to 26 – 35 age category, 15% respondents belon to 36 – 50 age category and 18% respondents having age above 50 years.

TABLE NO. 4.2 Gender wise classification.

Sr. No.	Gender wise classification	No. of Respondents	Percentage
1	Male	61	58.7%
2	Female	43	41.3%
	Total	**104**	**100%**

TABLE NO. 4.2 Gender wise classification.

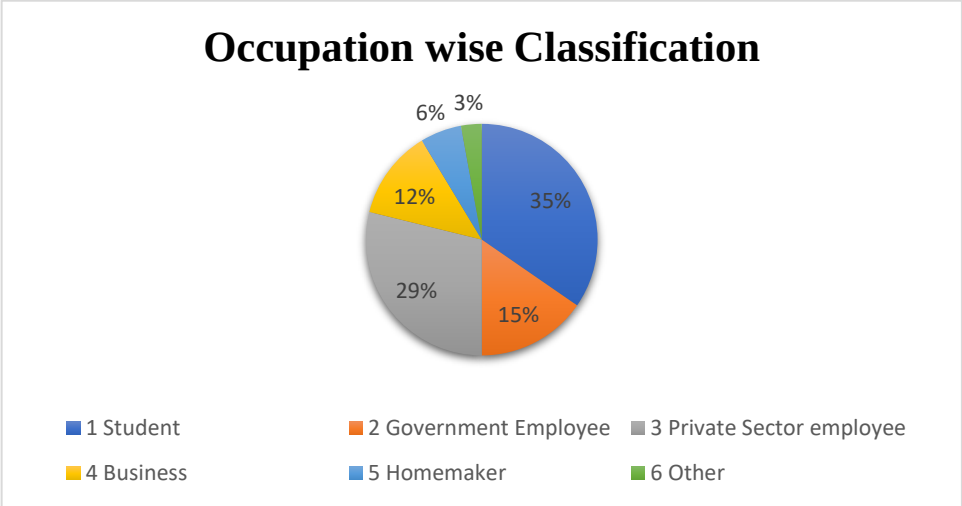

INTERPRETATION:

Above table shows that out of all respondents 58.70% respondents are male passengers and remaining 41.30% respondents are female passengers.

TABLE NO. 4.3 Occupation wise Classification.

Sr. No.	Occupation	No. of Respondents	Percentage
1	Student	36	34.6%
2	Government Employee	16	15.4%
3	Private Sector employee	30	28.8%
4	Business	13	12.5%
5	Homemaker	6	5.8%
6	Other	3	2.9%
	Total	**104**	**100%**

CHART NO. 4.3 Occupation wise Classification.

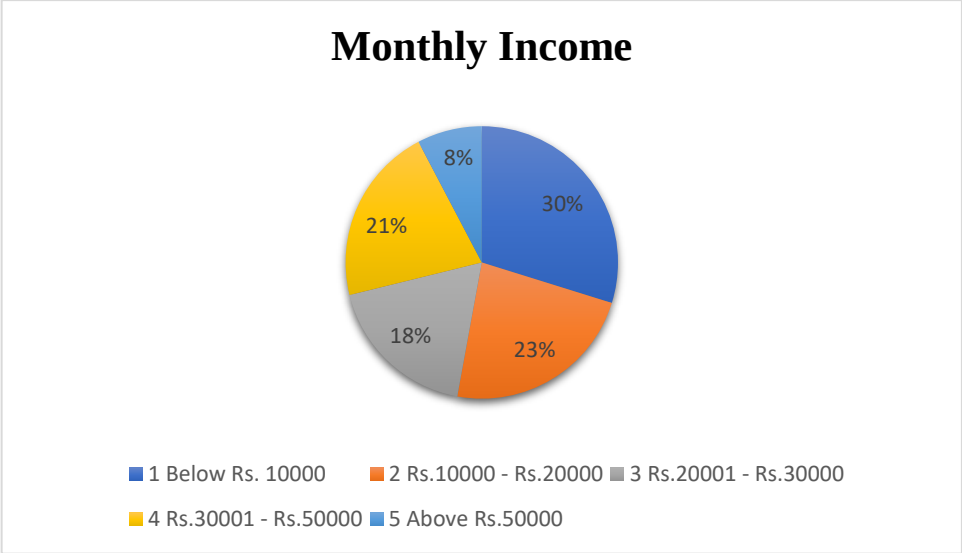

INTERPRETATION:

Above table shows that out of all respondents (passengers) 35% respondents are students, 15% respondents are government employees, 29% respondents are private employees, 12% respondents having own business, 6% respondents are homemaker and 3% respondents having other income source.

TABLE NO. 4.4 What is your monthly income?

Sr. No.	Monthly Income	No. of Respondents	Percentage
1	Below Rs. 10000	31	29.8%
2	Rs.10000 - Rs.20000	24	23.1%
3	Rs.20001 - Rs.30000	19	18.3%
4	Rs.30001 - Rs.50000	22	21.2%
5	Above Rs.50000	8	7.7%
	Total	**104**	**100%**

CHART NO. 4.4 What is your monthly income?

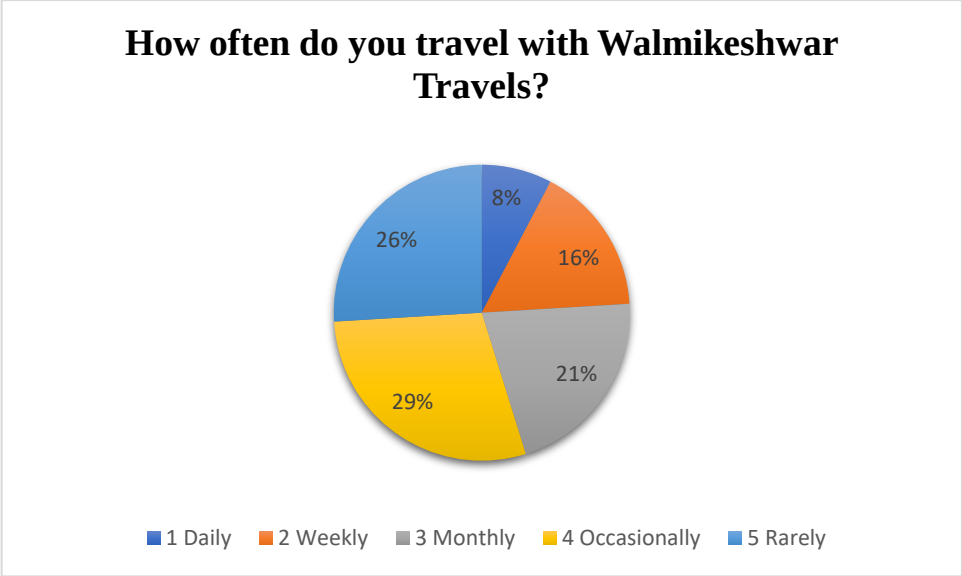

INTERPRETATION:

Above table shows that out of all respondents (passengers) 30% respondents having monthly income below Rs. 10000, 23% respondents having Rs.10000 - Rs.20000, 18% respondents having Rs.20001 - Rs.30000, 21% respondents having Rs.30001 - Rs.50000 and 8% respondents having monthly income above Rs. 50000.

TABLE NO. 4.5 How often do you travel with Walmikeshwar Travels?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Daily	8	7.7%
2	Weekly	17	16.3%
3	Monthly	22	21.2%
4	Occasionally	30	28.8%
5	Rarely	27	26%
	Total	**104**	**100%**

CHART NO. 4.5 How often do you travel with Walmikeshwar Travels?

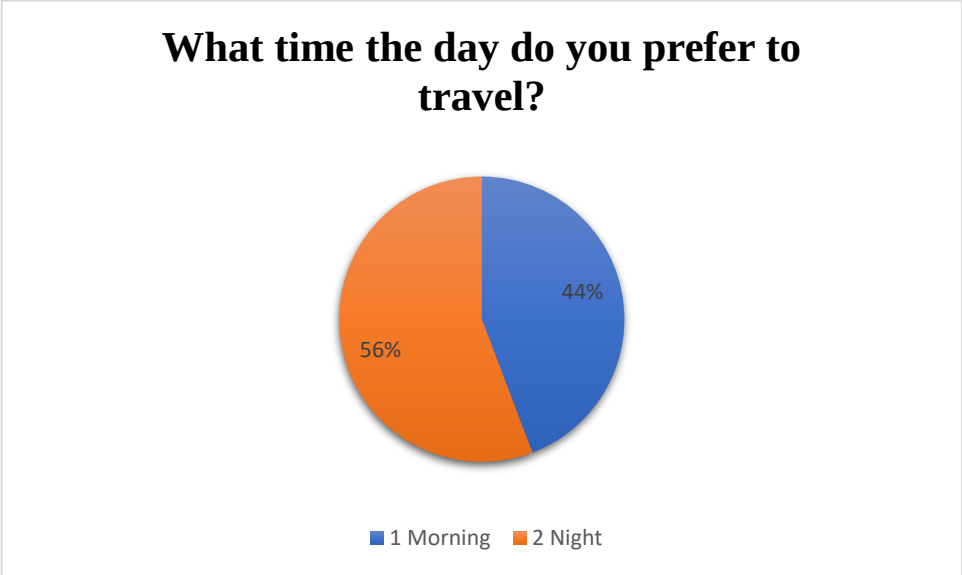

INTERPRETATION:

Above table shows that out of all respondents (passengers) 8% respondents daily travel with Walmikeshwar Travels, 16% respondents weekly travel with Walmikeshwar Travels, 21% respondents monthly travel with Walmikeshwar Travels, 29% respondents occasionally travel with Walmikeshwar Travels and 26% respondents rarely travel with Walmikeshwar Travels.

TABLE NO. 4.6 What time the day do you prefer to travel?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Morning	46	44.2%
2	Night	58	55.8%
	Total	**104**	**100%**

CHART NO. 4.6 What time the day do you prefer to travel?

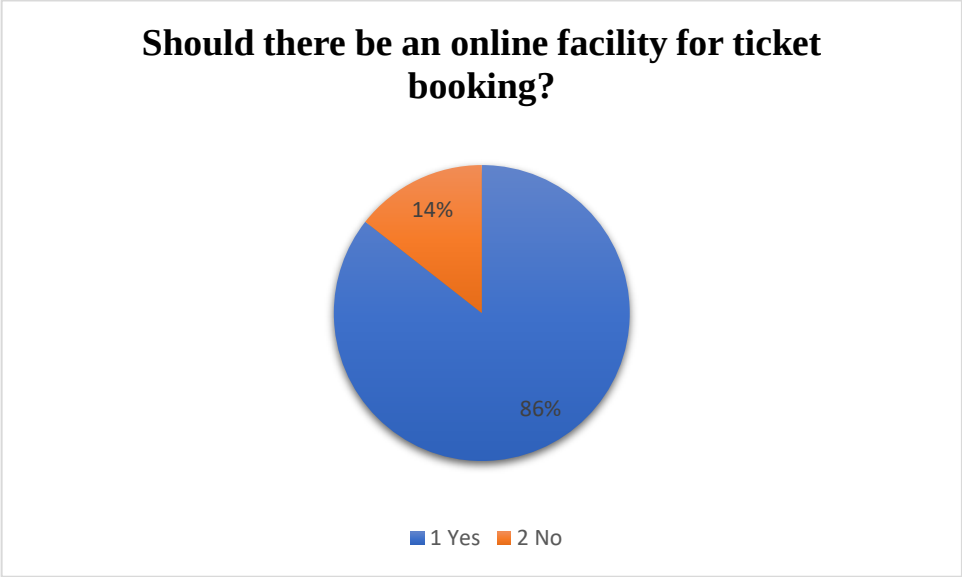

INTERPRETATION:

Above table shows that out of all respondents (passengers) 44% respondents are travelling in day and 56% respondents are prefer night for travelling.

TABLE NO. 4.7 Should there be an online facility for ticket booking?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Yes	89	85.6%
2	No	15	14.4%
	Total	**104**	**100%**

CHART NO. 4.7 Should there be an online facility for ticket booking?

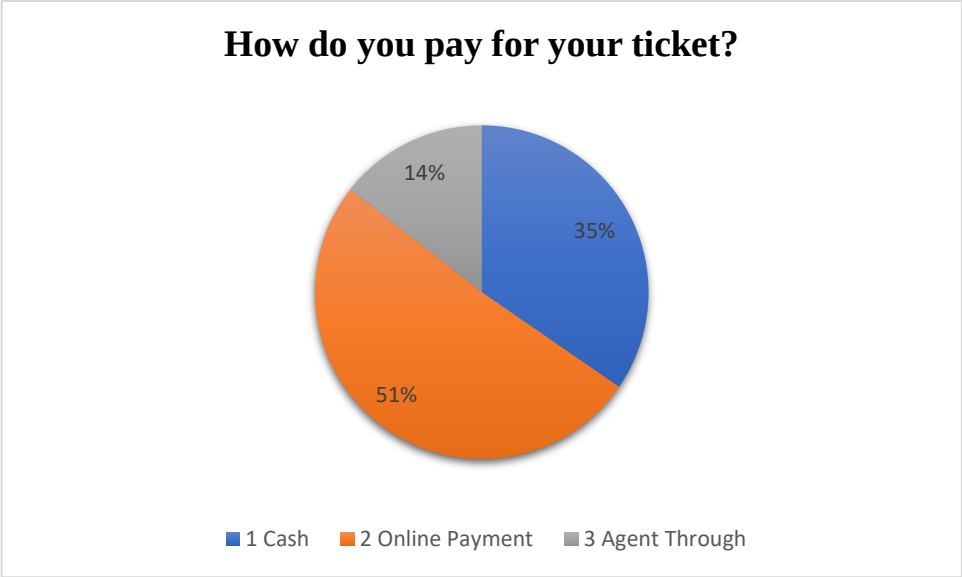

INTERPRETATION:

Above table shows that out of all respondents (passengers) 86% respondents agree for to start online facility for ticket booking and 14% respondents are not agree.

TABLE NO. 4.8 How do you pay for your ticket?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Cash	36	34.6%
2	Online Payment	53	51%
3	Agent Through	15	14.4%
	Total	**104**	**100%**

CHART NO. 4.8 How do you pay for your ticket?

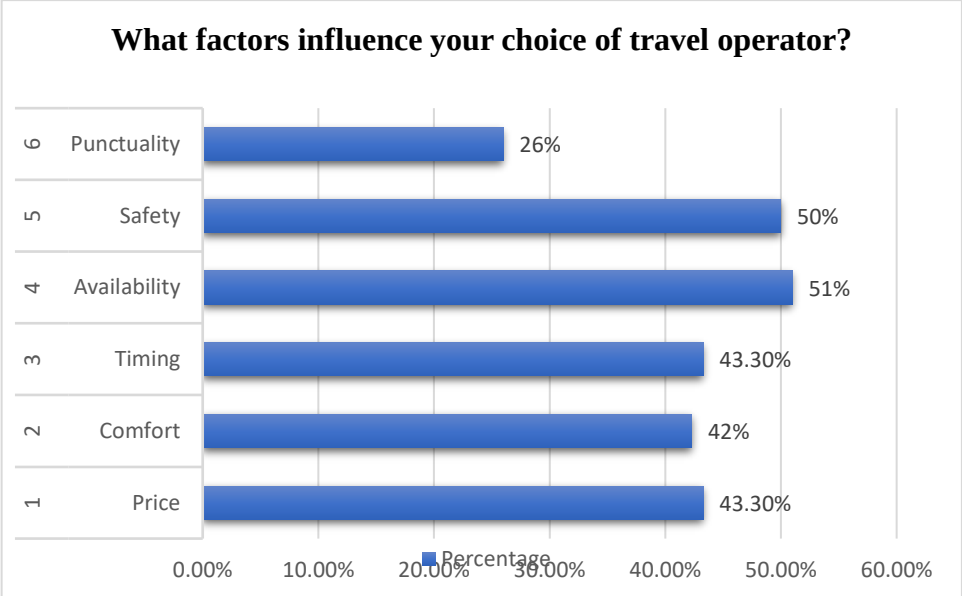

INTERPRETATION:

Above table shows that out of available respondents (passengers) 35% respondents pay for their ticket through cash, 51% respondents pay for their ticket through online payment, 14% respondents pay for their ticket through agent.

TABLE NO. 4.9 What factors influence your choice of travel operator?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Price	45	43.3%
2	Comfort	44	42.3%
3	Timing	45	43.3%
4	Availability	53	51%
5	Safety	52	50%
6	Punctuality	27	26%

CAHRT NO. 4.9 What factors influence your choice of travel operator?

INTERPRETATION:

Above graph shows that out of all respondents (passengers) 43.3% respondents influence through price factor, 42% respondents influence through comfort factor, 43.3% respondents influence through timing factor, 51% respondents influence through availability factor, 50% respondents influence through safety factor and 26% respondents influence through punctuality factor.

TABLE NO. 4.10 Are you aware of other travel operators on your route?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Yes	75	72.1%
2	No	29	27.9%
	Total	**104**	**100 %**

CHART NO. 4.10 Are you aware of other travel operators on your route?

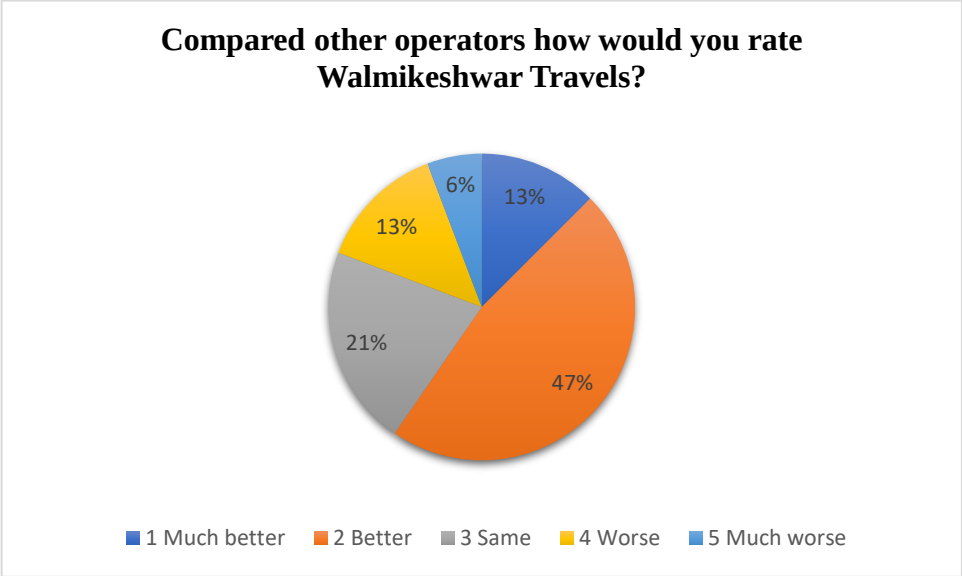

INTERPRETATION:

Above graph shows that out of all respondents (passengers) 72% respondents aware about other travel operators on their route and 28% respondents are not aware about other travel operators on their route.

TABLE NO. 4.11 Compared other operators how would you rate Walmikeshwar Travels?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Much better	13	12.5%
2	Better	49	47.1%
3	Same	22	21.2%
4	Worse	14	13.5%
5	Much worse	6	5.8%
	Total	**104**	**100%**

CHART NO. 4.11 Compared other operators how would you rate Walmikeshwar Travels?

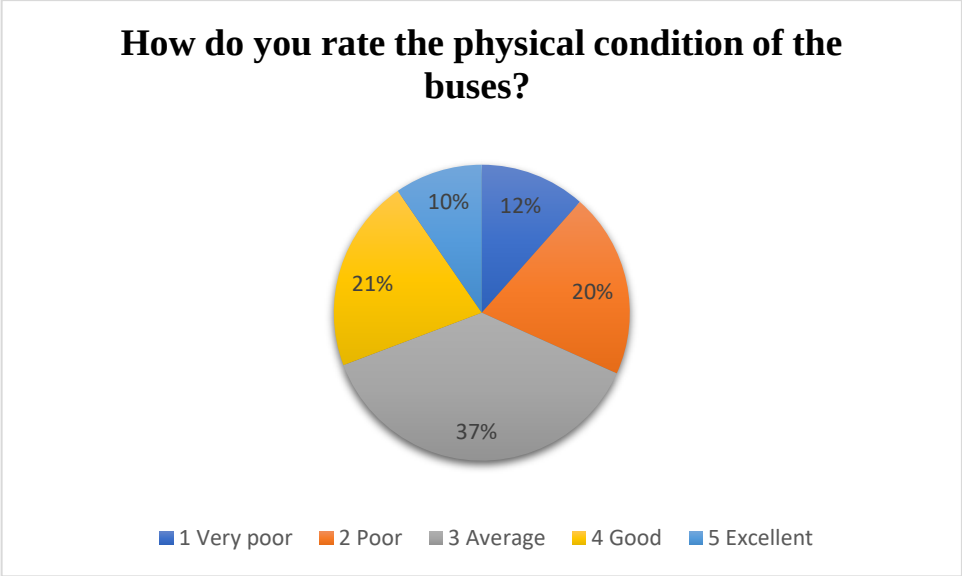

INTERPRETATION:

Above graph shows that out of all respondents (passengers) 13% respondents says that this travels much better than other travels, 47% respondents says that this travels better than other travels, 21% respondents says that this travels same than other travels, 13% respondents say that these travels worse than other travels, 6% respondents says that this travels much worse than other travels.

TABLE NO. 4.12 How do you rate the physical condition of the buses?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Very poor	12	11.5%
2	Poor	21	20.2%
3	Average	39	37.5%
4	Good	22	21.2
5	Excellent	10	9.6%
	Total	**104**	**100%**

CHART NO. 4.12 How do you rate the physical condition of the buses?

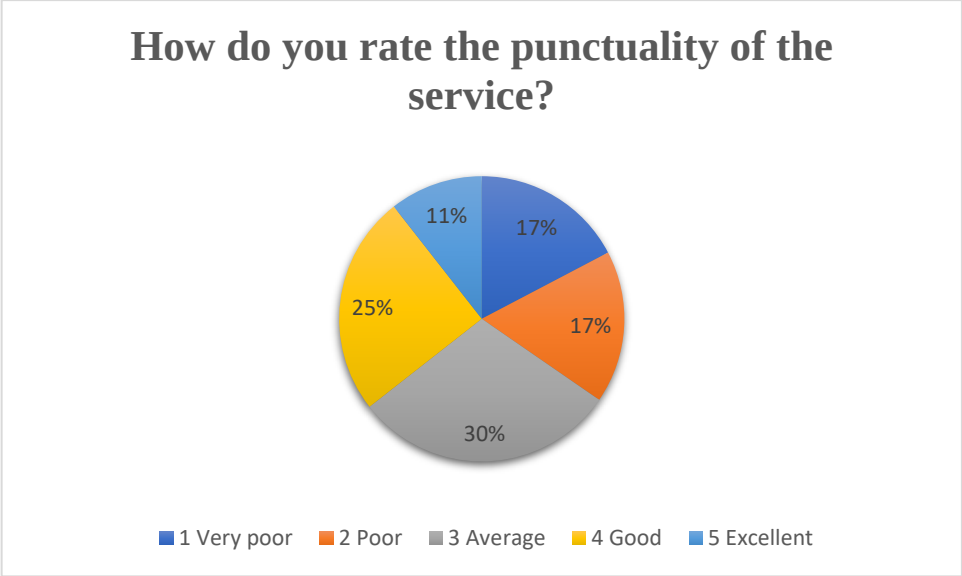

INTERPRETATION:

Above graph shows that out of available respondents (passengers) 12% respondents rate the physical condition very poor, 20% respondents rate the physical condition poor, 37% respondents rate the physical condition average, 21% respondents rate the physical condition good and 10% respondents rate the physical condition excellent.

TABLE NO. 4.13 How do you rate the punctuality of the service?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Very poor	18	17.3%
2	Poor	18	17.3%
3	Average	31	29.8%
4	Good	26	25%
5	Excellent	11	10.6%
	Total	**104**	**100%**

CHART NO. 4.13 How do you rate the punctuality of the service?

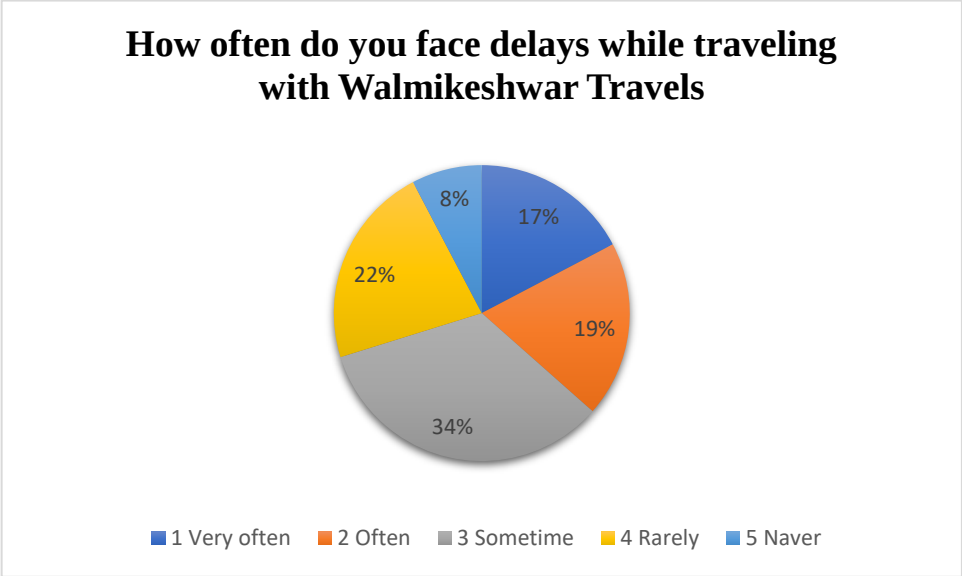

INTERPRETATION:

Above graph shows that out of all respondents (passengers) 17% respondents rate the punctuality of the service as very poor, 17% respondents rate the punctuality of the service as poor, 30% respondents rate the punctuality of the service as average, 25% respondents rate the punctuality of the service as good and 11% respondents rate the punctuality of the service as excellent.

TABLE NO. 4.14 How often do you face delays while traveling with Walmikeshwar Travels?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Very often	18	17.3%
2	Often	20	19.2%
3	Sometime	35	33.7%
4	Rarely	23	22.1%
5	Naver	8	7.7%
	Total	**104**	**100%**

CHART NO. 4.14 How often do you face delays while traveling with Walmikeshwar Travels?

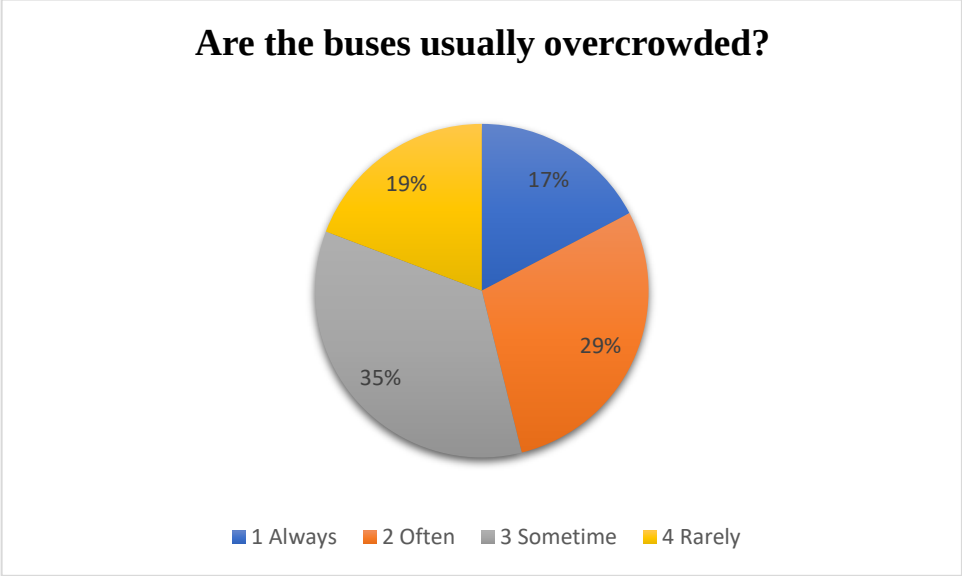

INTERPRETATION:

Above graph shows that out of available respondents (passengers) 17% respondents very often face delays while travelling with Walmikeshwar travels, 19% respondents often face delays while travelling with Walmikeshwar travels, 34% respondents sometimes face delays while travelling with Walmikeshwar travels, 22% respondents rarely face delays while travelling with Walmikeshwar travels, 8% respondents never face delays while travelling with Walmikeshwar travels.

TABLE NO. 4.15 Are the buses usually overcrowded?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Always	18	17.3%
2	Often	30	28.8%
3	Sometime	36	34.6%
4	Rarely	20	19.2%
	Total	**104**	**100%**

CHART NO. 4.15 Are the buses usually overcrowded?

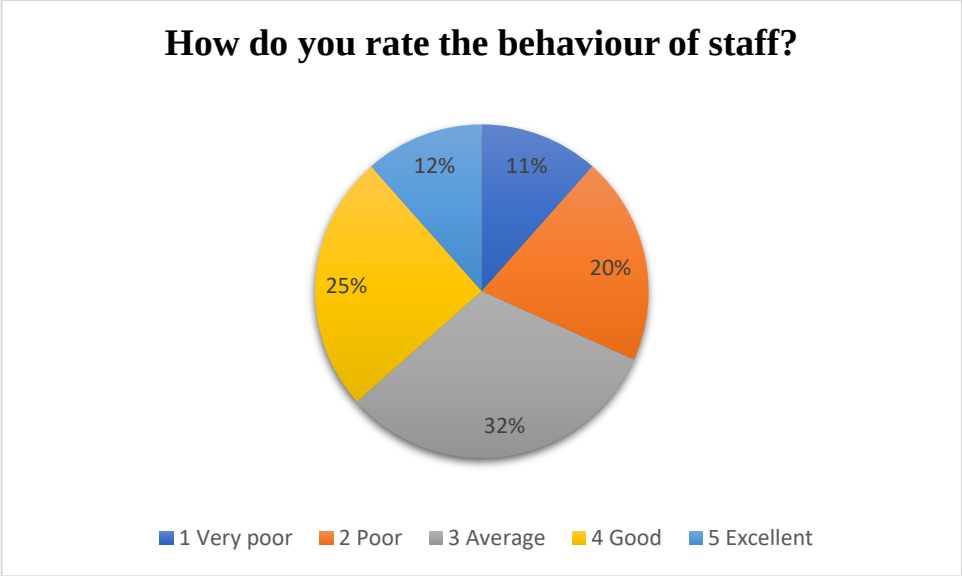

INTERPRETATION:

Above graph shows that out of available respondents (passengers) 17% respondents says that buses are always overcrowded, 29% respondents says that buses are often overcrowded, 35% respondents says that buses are sometimes overcrowded, 19% respondents says that buses are rarely overcrowded.

TABLE NO. 4.16 How do you rate the behaviour of staff?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Very poor	12	11.5%
2	Poor	21	20.2%
3	Average	33	31.7%
4	Good	26	25%
5	Excellent	12	11.5%
	Total	**104**	**100%**

CHART NO. 4.16 How do you rate the behaviour of staff?

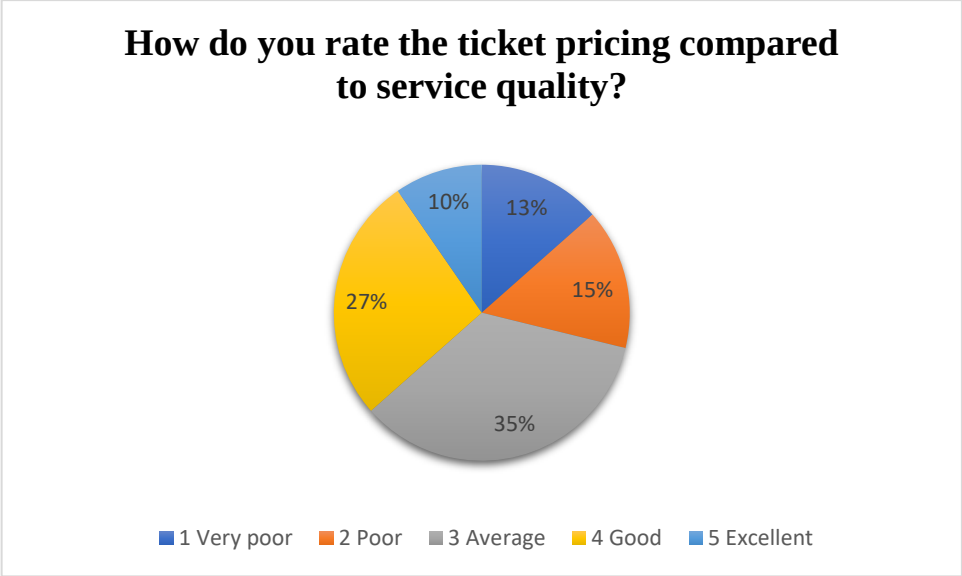

INTERPRETATION:

Above graph shows that out of available respondents (passengers) 11% respondents says that behaviour of staff is very poor, 20% respondents says that behaviour of staff is poor, 32% respondents says that behaviour of staff is average, 25% respondents says that behaviour of staff is good and 12% respondents says that behaviour of staff is excellent.

TABLE NO. 4.17 How do you rate the ticket pricing compared to service quality?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Very poor	14	13.5%
2	Poor	16	15.4%
3	Average	36	34.6%
4	Good	28	26.9%
5	Excellent	10	9.6%
	Total	**104**	**100%**

TABLE NO. 4.17 How do you rate the ticket pricing compared to service quality?

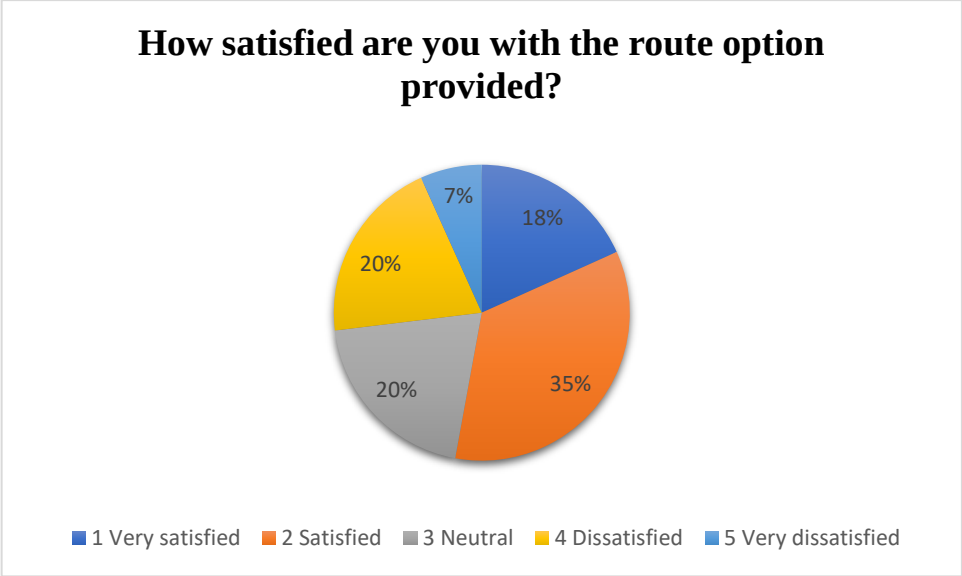

INTERPRETATION:

Above graph shows that out of available respondents (passengers) 13% respondents says that ticket pricing is very poor compared to the service quality, 15% respondents says that ticket pricing is poor compared to the service quality, 35% respondents says that ticket pricing is average compared to the service quality, 27% respondents says that ticket pricing is good compared to the service quality and 10% respondents says that ticket pricing is excellent compare.

TABLE NO. 4.18 How satisfied are you with the route option provided?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Very satisfied	19	18.3%
2	Satisfied	36	34.6%
3	Neutral	21	20.2%
4	Dissatisfied	21	20.2%
5	Very dissatisfied	7	6.7%
	Total	**104**	**100%**

CHART NO. 4.18 How satisfied are you with the route option provided?

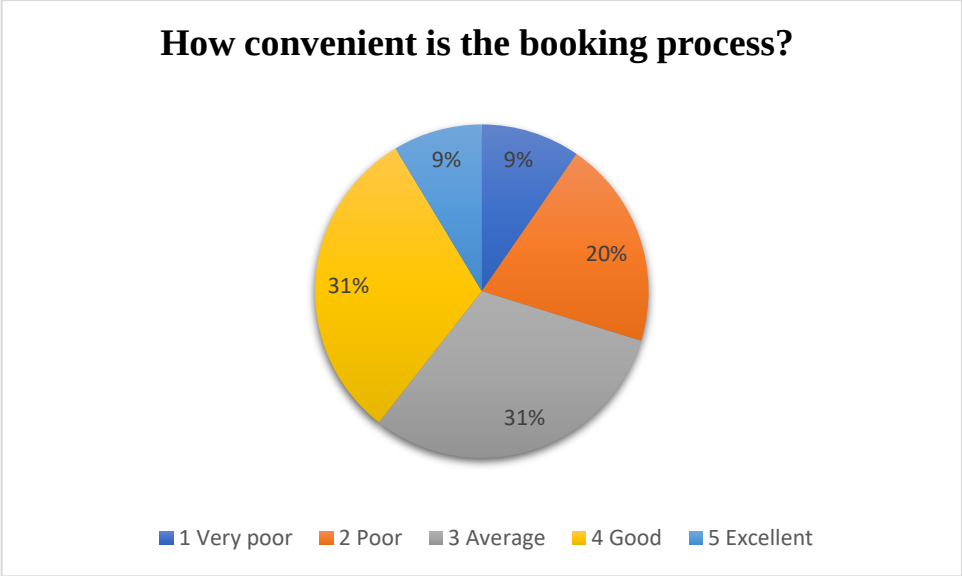

INTERPRETATION:

Above table shows that out of available respondents (passengers) 18% respondents are very satisfied with the route option provided, 35% respondents are satisfied with the route option provided, 20% respondents are neutral satisfied with the route option provided, 20% respondents are dissatisfied with the route option provided and 7% respondents are very dissatisfied with the route option provided.

TABLE NO. 4.19 How convenient is the booking process?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Very poor	10	9.6%
2	Poor	21	20.2%
3	Average	32	30.8%
4	Good	32	30.8%
5	Excellent	9	8.7%
	Total	**104**	**100%**

CHART NO. 4.19 How convenient is the booking process?

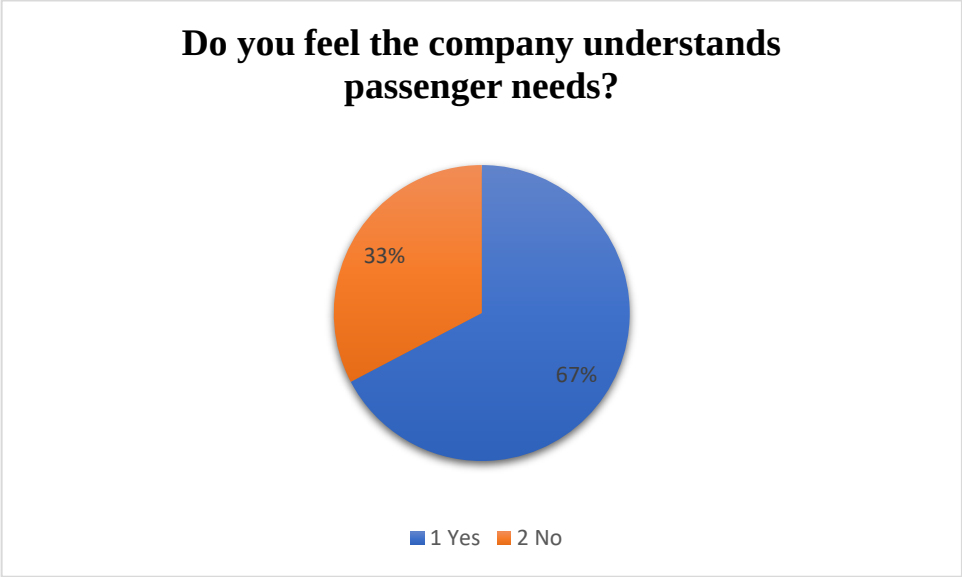

INTERPRETATION:

Above table shows that out of available respondents (passengers) 9% respondents say that booking process is very poor, 20% respondents say that booking process is poor, 31% respondents say that booking process is average, 31% respondents say that booking process is good, 9% respondents say that booking process is excellent.

TABLE NO. 4.20 Do you feel the company understands passenger needs?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Yes	70	67.3 %
2	No	34	32.7%
	Total	**104**	**100 %**

CHART NO. 4.20 Do you feel the company understands passenger needs?

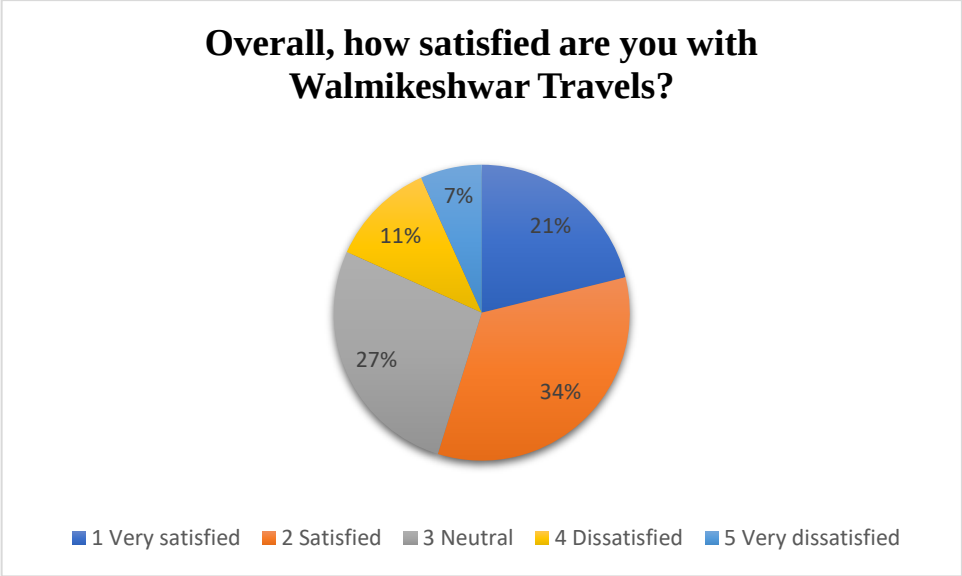

INTERPRETATION:

Above table shows that out of available respondents (passengers) 67% respondents says that company understand the passengers need and 33% respondents says that company not understand the passengers need.

TABLE NO. 4.21 Overall, how satisfied are you with Walmikeshwar Travels?

Sr. No.	Particulars	No. of Respondents	Percentage
1	Very satisfied	22	21.2%
2	Satisfied	35	33.7%
3	Neutral	28	26.9%
4	Dissatisfied	12	11.5%
5	Very dissatisfied	7	6.7%
	Total	**104**	**100%**

CHART NO. 4.21 Overall, how satisfied are you with Walmikeshwar Travels?

INTERPRETATION:

Above table shows that out of available respondents (passengers) 21% respondents are very satisfied with Walmikeshwar Travels, 34% respondents are satisfied with Walmikeshwar Travels, 27% respondents are neutrally satisfied with Walmikeshwar Travels, 11% respondents are dissatisfied with Walmikeshwar Travels, 7% respondents are very dissatisfied with Walmikeshwar Travels.

CHAPTER V
FINDINGS AND SUGGESTION

1. Introduction
2. Key Findings From Data Analysis Through MySQL
3. Key Findings From Data Analysis Through Excel
4. Suggestion

5.1 INTRODUCTION

Based on the detailed analysis of passenger responses in Chapter 4, this section presents key findings regarding passenger trends, service quality and overall satisfaction with Walmikeshwar Travels. The findings are categorized based on demographics, travel patterns, service quality perceptions, and recommendations for improvement.

5.2 KEY FINDINGS FROM DATA ANALYSIS THROUGH MYSQL

The analysis of passenger survey data using MySQL has provided valuable insights into the service quality and trends related to Walmikeshwar Travels. The following are the key findings based on the SQL queries and results:

1. Passenger Dissatisfaction with Bus Conditions: (Image No. 3)

A significant number of passengers rated the bus condition as "Poor" or "Very Poor." This shows that vehicle maintenance, cleanliness, and seating comfort are areas that require urgent attention to enhance passenger satisfaction.

2. Issues with Punctuality: (Image No. 4)

Several passengers expressed dissatisfaction with the punctuality of buses. This indicates delays are frequent, and the travel schedule may not be reliable. Passengers expect timely services, and this is a critical factor in choosing transport providers.

3. Staff Behaviour Feedback: (Image No. 5)

Multiple passengers rated the behaviour of staff as poor. This suggests a need for training in customer service and communication for the staff to improve the travel experience and maintain professionalism.

4. Overcrowding Concerns: (Image No. 7)

The count of passengers reporting frequent overcrowding is notable. This highlights an issue with capacity management, indicating the need for more buses or better scheduling during peak hours.

5. Online Booking Preferences: (Image No. 8)

The majority of passengers prefer online booking, which shows a growing inclination toward digital convenience. This is an opportunity for Walmikeshwar Travels to enhance its online platform for smoother and faster ticketing.

6. Time Preferences for Travel: (Image No. 9)

Most passengers prefer to travel at night compared to the morning. This information can be used to adjust schedules and increase the number of trips during peak preference times.

7. Demographic Insights: (Image No. 10)

The largest group of passengers belongs to the 18–25 age category, followed by those above 50. This suggests the company's services are widely used by young adults and senior citizens. Special services could be tailored to these groups.

8. Payment Method Preferences: (Image No. 11)

Online payment is the most preferred method, followed by cash. This reinforces the need for a robust and user-friendly online payment system.

9. Factors Influencing Travel Decisions: (Image No. 12)

Passengers prioritize factors such as price, comfort, safety, and timing when choosing travel services. Focusing improvements in these key areas will help attract and retain more passengers.

10. Overall Satisfaction: (Image No. 13)

The satisfaction levels are mixed, with a fair number being satisfied or very satisfied. However, a significant portion remains neutral or dissatisfied. This means there is room for improvement, especially in service consistency and customer engagement.

5.3 KEY FINDINGS FROM DATA ANALYSIS THROUGH EXCEL

5.2.1 Demographic Findings

1. Age Distribution: (Table No. 4.1)

The majority (48.1%) of respondents belong to the 18-25 age group, indicating that young travellers (students and professionals) form a significant customer base.

About 18.3% of passengers are above 50 years old, suggesting that senior citizens also rely on the service.

2. Gender Distribution: (Table No. 4.2)

Male passengers constitute 58.7%, while female passengers make up 41.3% of the respondents.

This indicates a fairly balanced gender usage, though slightly higher for male travellers.

3. Occupation of Passengers: (Table No. 4.3)

34.6% of respondents are students, making them the largest passenger group.

28.8% are private sector employees, followed by 15.4% government employees and 12.5% business owners.

This suggests that the majority of passengers use the service for work, education, or business-related travel.

4. Income Level of Passengers: (Table No. 4.4)

29.8% of respondents earn below ₹10,000, while 23.1% earn between ₹10,000-₹20,000.

This indicates that a large portion of passengers belong to the lower or middle-income group, emphasizing the need for affordable travel fares.

5.2.2 Travel Trends

1. Travel Frequency: (Table No. 4.5)

28.8% travel occasionally, followed by 26% who travel rarely.

Only 7.7% travel daily, indicating that Walmikeshwar Travels is used more for occasional travel rather than daily commuting.

2. Preferred Travel Time: (Table No. 4.6)

55.8% of passengers prefer night travel, while 44.2% prefer morning travel.

This suggests that evening and night services are in high demand.

3. Need for Online Ticket Booking: (Table No. 4.7)

85.6% of respondents support online ticket booking, showing strong demand for digital ticketing solutions.

Only 14.4% prefer offline methods, indicating that traditional booking methods are becoming less popular.

5.2.3 Service Quality Perceptions

1. Factors Influencing Travel Operator Choice: (Table No. 4.9)

Price (43.3%), timing (43.3%), and safety (50%) are major deciding factors.

Availability of buses (51%) was the most important factor, indicating that passengers prefer a reliable service with frequent buses.

2. Comparison with Other Operators: (Table No. 4.11)

47.1% rated Walmikeshwar Travels as "Better" than competitors, while 12.5% rated it "Much Better".

However, 13.5% found it worse, indicating room for improvement in some areas.

3. Physical Condition of Buses: (Table No. 4.12)

37.5% rated the buses as "Average", while 20.2% rated them as "Poor".

Only 9.6% found the buses in "Excellent" condition, indicating that maintenance and cleanliness improvements are needed.

4. Punctuality of Service: (Table No. 4.13)

29.8% rated punctuality as "Average", while 17.3% rated it "Poor".

Only 10.6% found it "Excellent", showing that punctuality is a major area for improvement.

5. Delays in Travel: (Table No. 4.14)

33.7% of respondents sometimes experience delays, and 17.3% reported frequent delays.

Only 7.7% said they never experience delays, confirming that service timeliness needs to be addressed.

6. Overcrowding Issues: (Table No. 4.15)

34.6% reported occasional overcrowding, while 28.8% said overcrowding is frequent.

This suggests a need for better crowd management and increased bus frequency during peak hours.

7. Staff Behaviour: (Table No. 4.16)

31.7% rated staff behaviour as "Average", while 11.5% found it "Very Poor".

Only 11.5% rated it "Excellent", indicating that customer service training may be necessary.

8. Ticket Pricing vs. Service Quality: (Table No. 4.17)

34.6% rated ticket pricing as "Average", while 13.5% felt pricing was "Very Poor".

This suggests that some passengers feel the service quality does not justify the ticket cost.

5.2.4 Overall Passenger Satisfaction

1. Route Availability Satisfaction: (Table No. 4.18)

34.6% are satisfied, but 20.2% are dissatisfied.

This indicates that some routes may need better coverage.

2. Ease of Booking Process: (Table No. 4.19)

30.8% rated booking as "Good", but 20.2% rated it "Poor".

This supports the demand for an improved and digital booking experience.

3. Understanding Passenger Needs: (Table No. 4.20)

67.3% believe the company understands passenger needs, while 32.7% disagree.

This suggests that while many customers are satisfied, there is still scope for better responsiveness to customer expectations.

4. Overall Satisfaction with Walmikeshwar Travels: (Table No. 4.21)

33.7% are satisfied, while 26.9% remain neutral.

11.5% are dissatisfied, showing that improvements in key areas can increase satisfaction.

5.4 SUGGESTIONS FOR IMPROVEMENT

Based on the findings from the data analysis, the following suggestions can help Walmikeshwar Travels improve its service quality and passenger satisfaction:

1. Improve Punctuality and Reduce Delays

Maintain a strict timetable and improve communication with passengers about delays.

2. Enhance Bus Condition and Cleanliness

3. Increase Bus Frequency and Reduce Overcrowding

4. Introduce Digital Ticket Booking System

Develop a mobile app or website for easy online ticket booking.

Offer discounts or cashback for passengers using digital booking platforms.

5. Improve Customer Service and Staff Training

6. Expand Route Coverage and Improve Accessibility

Identify new routes based on passenger demand to increase convenience.

8. Conduct Regular Passenger Feedback Surveys

Use Google Forms or SMS surveys to gather regular feedback from passengers.

Address common complaints and make improvements based on survey results.

ANNEXURES

QUESTIONNAIRE

1) What is your age group?
    a) Below 18
    b) 18 – 25
    c) 26 – 35
    d) 36 – 50
    e) Above 50
2) What is your gender?
    a) Male
    b) Female
3) What is your occupation?
    a) Student
    b) Government Employee
    c) Private Sector Employee
    d) Business
    e) Homemaker
    f) Other
4) What is your monthly income?
    a) Below Rs. 10000
    b) Rs. 10000 – Rs. 20000
    c) Rs. 20001 – Rs. 30000
    d) Rs. 30001 – Rs. 50000
    e) Above Rs. 50000
5) How often do you travel with Walmikeshwar Travels?
    a) Daily
    b) Weekly
    c) Monthly
    d) Occasionally
    e) Rarely
6) What time of the day do you prefer to travel?
    a) Morning
    b) Night

7) Should there be an online facility for ticket booking?
    a) Yes
    b) No
8) How do you pay for your ticket?
    a) Cash
    b) Online Payment
    c) Through Agent
9) What factors influence your choice of travel operator?
    a) Price
    b) Comfort
    c) Timing
    d) Availability
    e) Safety
    f) Punctuality
10) Are you aware of other travel operators on your route?
    a) Yes
    b) No
11) Compared to other operators, how would you rate Walmikeshwar Travels?
    a) Much Better
    b) Better
    c) Same
    d) Worse
    e) Much Worse
12) How do you rate the physical condition of the bus?
    a) Very Poor
    b) Poor
